Release Notes—version 1.0

General

If you are installing your Io Express hardware into a computer that has previously had another video capture card or drivers, we recommend running the AJA Conflict Checker utility BEFORE installing the Io Express software. The AJA Conflict Checker will help you identify old drivers or software files that need to be removed before installing the new software. This includes the AJA KONA cards and the other AJA Io products. AJA provides separate installers for all of our Desktop products. Drivers for these other AJA products cannot be used simultaneously on the same operating system as the Io Express driver; they are mutually exclusive. Also, please read the "ReadMeFirst.PDF" document on the installation CD, particularly if you are installing for the first time.

In This Release

- Support for Io Express on Mac OSX Snow Leopard and Mac OSX Leopard
- Support for Final Cut Pro 6.0.x and support for Final Cut Pro 7

Special Operational Notes and Considerations

- It is very important that Io Express be powered up and powered down properly. Io Express, the ExpressCard and the PCIe HBA are not hot pluggable at this time. To avoid boot up issues or unexpected shutdowns, always be sure that the Io Express is connected to the ExpressCard HBA or PCIe HBA and powered up before starting up your MacBook Pro or MacPro. Conversely, always be sure to shutdown your computer before powering down Io Express.
- Io Express supports video output from Final Cut Pro, Color and Soundtrack Pro. Video output from Motion is not supported at this time.

Please consult the Io Express Manual for a full description of the product's operational features.
