Introduction

The SRExpress application controls transfer of files from Sony SR-R1 digital recorders to RAID storage connected to a PC or a Macintosh computer. A KONA 3G card for Mac or PC, or an Io XT for Thunderbolt-equipped Macs, serves as the intermediary device for file capture between the recorder and the computer with RAID. Once transferred, the files can be edited.

File Formats

The SRExpress application transfers MXF (.mxf) file types from the Sony recorder to the computer with RAID.

Features

- Controls the recorder to perform file transfers to the Mac or PC with RAID
- Selects files in batches or individually
- Transfers files using 3G SDI and Thunderbolt connections
- Allows preview during transfer, or preview can be turned off

I/O Connections

System interconnections differ slightly depending on whether you are using a Mac with Io XT or a PC or Mac with KONA 3G.

Connections for Mac and Io XT

Mac and Io XT systems are interconnected as follows:

1. Ensure power is OFF for all devices.
2. Connect Sony REMOTE to Io XT RS-422 IN (control connection).
3. Connect Sony HD SDI OUT A to Io XT SDI IN1 (video/audio data connection).
4. Connect a 250 MB/second or faster RAID drive to a Thunderbolt-enabled Macintosh computer.
5. Connect an Io XT Thunderbolt port to the second Thunderbolt port of the RAID storage drive.
6. Make all other connections as explained in the manual for each device.
7. Switch power ON for all devices.

4. Double-click the DMG or .msi installer file and follow the prompts to install the application on the Mac or PC.

Using the AJA SRExpress Application

The AJA SRExpress application offers a very quick and easy-to-use interface for transferring .mxl files from the Sony SR-R1 recorder to the Macintosh computer system where the files can be used for editing.

The following illustration and text describe the user interface controls.

Transferring Files Using SRExpress

The following steps demonstrate typical use of the SRExpress application.

3. Select the port connected to the Sony device from the pull-down port menu. The SRExpress application scans the Sony device and lists its files.
4. Click the file or Control/Cmd-click multiple files in the list that you want to transfer from the Sony to the computer. To select all files, right-click and select *Check All Files*. To deselect all files, right-click and select *Uncheck All Files*.
5. Click the *Current Folder* menu to select the destination folder on the computer where you want the transferred files to be placed.
6. Select the *Preview* pull-down menu if you want to view the files as they transfer. When enabled, Preview shows one still frame for each second of video.
7. Right-click and select *Rescan File List* if you have changed files on the Sony SR-R1 and wish to rescan the file list.
8. Click *Start Transfer* to transfer the files. If you want to stop a transfer in progress, click *Stop Transfer*.

After files are transferred to your computer, they are stored on the local RAID drive where they are available for editing using any editing software that can work with .mxf files.

Viewing MXF Files in Your Editor

MXF files may require a Sony SR plug-in to allow real-time viewing in your editing application. These steps explain how to add the plug-in to allow viewing of MXF files in Avid Media Composer or Final Cut Pro (FCP) editing software.

1. Download the SRViewer plug-in version for your editing software from Sony. There are versions for Avid Media Composer (labeled "SRPA-10") and Final Cut Pro (labeled "SRPM-10").
2. Drill down through the zip files and folders to the installer file (.msi or DMG) for your PC or Mac platform.
3. Double-click the installer file and follow the prompts to install the plug-in.
4. Launch the editing application, Avid or FCP, and create a project or open an existing project.
5. Import the MXF file you want to view into the editor.
In Avid, select *File/Link to AMA Files* to locate and select the file.
In FCP, select *File/Import Files* to locate and select the file. You can also drag and drop MXF files onto the FCP application.

The MXF file you selected using the editor plays in the editor window in real time and can be edited using the editor's tools.
