Release Notes—Version 3.1

Introduction

This version provides improvements for Ki Pro. Be sure to consult the Installation and User Manual for detailed information about features and configuration guidelines (the most current documentation can always be found on www.aja.com/).

New Features

- Camera Data menu parameter additions for ARRI Alexa cameras, Panasonic AG-AF100 series cameras and the Sony PMW-F3 camera. Enables support for start/stop via ancillary SDI data when used with these cameras.
- Timelapse recording feature added via new CONFIG menu parameters for Interval Record, Interval Frames and Interval Time.

Improvements and Fixes

- Addressed an issue where select users of v3.0 firmware experienced stumbling playback of 720p files.
- Fixed an issue where spaces in the clip names impacted the ability to use the Ki Pro DATA-LAN file transfer feature.
- Additional improvements to RS-422 behavior when used with controllers and non-linear editors.

Special Considerations

- After a firmware update of Ki Pro, the web browser (Safari, Firefox, etc.) may lose its connection. A refresh of the web browser will reconnect the web UI with Ki Pro.
- Some clips created by Ki Pro may cause Final Cut Pro to bring up a "not optimized" prompt when imported. These clips are valid and can be used within Final Cut Pro.
- Do not attempt firmware updates while recording with Ki Pro; be sure the device is in the stopped state before performing a firmware update.
