

AJA Mac Drivers Release Notes—v10.4.2

Drivers for KONA, Io and T-TAP Mac products

General

This driver version is compatible with Mac OS X 10.7 (Lion) and OS X 10.8 (Mountain Lion).

If installing onto a computer that has previously had another video capture card or drivers, we recommend running the AJA Conflict Checker utility BEFORE installing the software.

The AJA Conflict Checker will help you identify old drivers or software files that need to be removed before installing the new software.

Also, please read the “ReadMeFirst.PDF” document, particularly if installing for the first time.

Installation Notes—Please Read

Mac OS X 10.8 Gatekeeper

On Mountain Lion, ensure that the Security & Privacy settings are configured to allow applications downloaded from Mac App Store and identified developers, as shown.

New Features

In conjunction with this driver update, a new version of AJA VTR Xchange is now available that includes the ability to create FCP X events automatically as part of the capture process. This eliminates the need to capture and then import footage into FCP X. Once a capture session is complete, an event is automatically created in FCP X and the footage is imported.

This new feature can be activated in either of two ways. In the Capture pulldown, enable the 'Import captured clips into Final Cut Pro X' option.

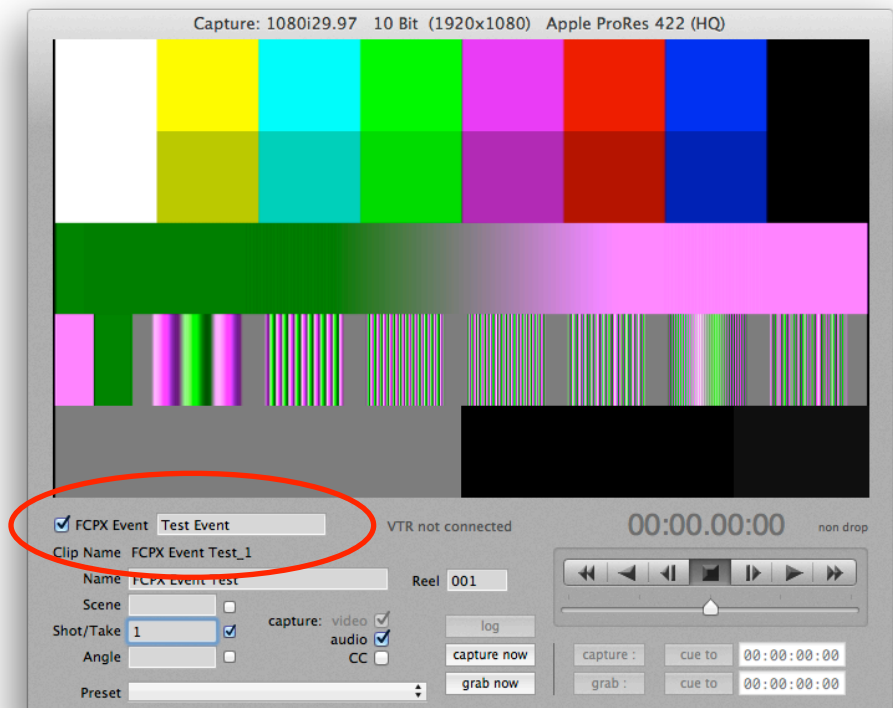

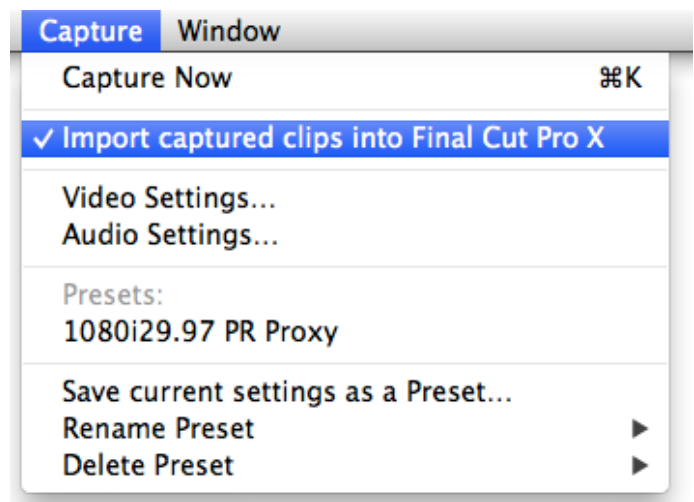

Alternately, in the main interface check the 'FCPX Event' box and enter the name of the event to be created.

Either of these methods will enable the feature and as capture sessions are completed, FCP X events will automatically be created with the specified name.

VTR Xchange is installed as part of the general driver installation and will appear in the Applications folder.

The latest version of VTR Xchange can always be downloaded for free from the AJA website here:
