Contacting Support

To contact AJA Video for sales or support, use any of the following methods:

Telephone: 800.251.4224 or 530.274.2048

Fax: 530.274.9442

Web: <http://www.aja.com>

Support Email: support@aja.com

Sales Email: sales@aja.com

Limited Warranty

AJA Video warrants that the product, will be free from defects in materials and workmanship for a period of three years from the date of purchase. If a product proves to be defective during this warranty period, AJA Video, at its option, will either repair the defective product without charge for parts and labor, or will provide a replacement in exchange for the defective product.

To obtain service under this warranty, the Customer must notify AJA Video of the defect before expiration of the warranty period and make suitable arrangements for the performance of service by contacting AJA Video support through the channels set forth on the support contacts web page at <http://www.aja.com/support/index.php>. Except as stated, the Customer shall bear all shipping, packing, insurance and other costs, excluding parts and labor, to effectuate repair. Customer shall pack and ship the defective product to a service center designated by AJA Video, with shipping charges prepaid. AJA Video shall pay to return the product to Customer but only if to a location within the country in which the AJA Video service center is located.

This warranty shall not apply to any defect, failure or damage caused by negligent, inadequate or improper use, handling or maintenance. Without limiting the foregoing, AJA Video shall not be obligated to furnish service under this warranty or repair any damage or malfunction a) resulting from attempts by personnel other than AJA Video representatives to install, repair or service the product, b) resulting from improper use or connection to incompatible equipment, c) caused by the use of non-AJA Video parts or supplies, d) if the product has been modified or integrated with other products when the effect of such a modification or integration increases the time or difficulty of servicing the product, or (e) resulting from being dropped or otherwise subjected to undue force, exposure to moisture or other corrosive or conductive substances, exposure to strong magnetic fields, use with improperly regulated power supplies, exposure to electric shock, use in temperatures outside the specified operating range, or otherwise failing to treat the product in accordance with the standard of care appropriate to sensitive and delicate electronic equipment.

EXCEPT AS STATED ABOVE, AJA VIDEO AND ITS VENDORS DISCLAIM IN THEIR ENTIRETY ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING WITHOUT LIMITATION ALL WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. AJA VIDEO'S RESPONSIBILITY TO REPAIR OR REPLACE TIMELY REPORTED DEFECTIVE PRODUCTS IS THE WHOLE AND EXCLUSIVE REMEDY CUSTOMER IS PROVIDED.

THE PRODUCT IS NOT INTENDED, STATED, OR WARRANTED TO OPERATE UNINTERRUPTED OR ERROR-FREE. YOU UNDERSTAND AND ACKNOWLEDGE THAT THE PRODUCT IS NOT INTENDED TO BE USED AS THE SOLE OR PRIMARY DATA SOURCE OR TARGET FOR CRITICAL DATA, AND THAT IT IS YOUR RESPONSIBILITY TO IMPLEMENT REDUNDANT CAPTURE AND BACKUP SYSTEMS AS APPROPRIATE.

Limitation of Liability

UNDER NO CIRCUMSTANCES SHALL AJA VIDEO BE LIABLE IN ANY WAY FOR ANY LOST, CORRUPTED OR DESTROYED DATA, FOOTAGE OR WORK, OR FOR ANY OTHER INDIRECT, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES, OR FOR ANY THIRD PARTY CLAIM, IN CONNECTION WITH THE PRODUCT, WHETHER RESULTING FROM DEFECTS IN THE PRODUCT, SOFTWARE OR HARDWARE FAILURE, OR ANY OTHER CAUSE WHATSOEVER, EVEN IF AJA VIDEO HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. AJA VIDEO'S LIABILITY IN CONNECTION WITH THIS PRODUCT SHALL UNDER NO CIRCUMSTANCES EXCEED THE PURCHASE PRICE PAID FOR THE PRODUCT.

Chapter 1: Introduction

KiPROmini

Overview

Ki Pro Mini is an all new way of connecting production and post using the same codec you edit with—Apple ProRes 422—for acquisition. Ki Pro Mini offers a miniature form factor that makes for the smallest camera and 10-bit recorder package available. The smallest member of the Ki Pro family, Ki Pro Mini is still powerful, supporting all four types of Apple ProRes 422 (including HQ, LT and Proxy). Ki Pro Mini simplifies the link between production and post by acquiring on the best codec for use with Apple Final Cut Studio, from any SDI or HDMI camera, regardless of format. With its high quality digital connectivity, you've got the perfect portable digital onset capture solution.

AJA's Ki Pro Mini was designed as a miniature field recorder for creating "ready-to-edit" professional digital video. Ki Pro Mini supports an Apple "file-based" workflow by recording standard Apple ProRes 422 QuickTime files on industry standard Compact Flash (CF) media. When removed, Compact Flash cards function as standard HFS+ drives when connected to a Mac computer via any standard off the shelf Compact Flash reader.

Ki Pro Mini's light weight and small form factor allow it to be attached to cameras and production equipment in a wide variety of ways. Users can mount it to wireless microphone plates, battery adapter plates or hot shoe adapters via 3rd-party accessories.

Internally, Ki Pro Mini natively supports the Apple ProRes 422 codecs in hardware, allowing realtime capture directly to Apple ProRes 422 QuickTime files. In fact, while the camera is recording to its own tape or file-based memory, Ki Pro Mini can simultaneously capture the media as ProRes so it's instantly ready to edit when the removable Compact Flash cards are connected to a Mac. With this kind of flexibility, you can save time, steps, and get your project done quicker and with the highest quality.

Like AJA's famous KONA and Io HD desktop products, Ki Pro Mini offers unparalleled I/O quality. Within its portable and rugged form factor, Ki Pro Mini offers broadcast quality SD/HD digital I/O including SDI, HD-SDI and HDMI, two channels of balanced analog audio (2 XLRs) with switch selectable line/mic levels, and LTC timecode input.

Control options are flexible, with simple interfaces available from either the front panel, or Ethernet 10/100/1000 connection is possible via an RJ45 connector, allowing remote control and configuration from a Mac or PC web browser.

This manual covers the installation and operation of Ki Pro Mini and its optional accessories.

Features

Ki Pro Mini offers a large number of unique features for optimum quality, ease of use, and support for a wide variety of workflows and environments. Ki Pro Mini provides flexible standard or high definition recording, for versatile operation in a mixed SD/HD environment, with a very small form factor and readily available storage.

Hardware

- Apple ProRes 422, Apple ProRes 422 (HQ), Apple ProRes 422 (LT), and Apple ProRes 422 (Proxy)—SD, HD 720/1080, full-raster 10 bit 4:2:2, realtime, implemented in hardware
- HD/SD SDI I/O (2 BNC)
- HDMI I/O (2 HDMI)
- 2 channel balanced analog audio Input (2 XLR)
- LTC Input (1 BNC)
- 10/100/1000 Ethernet LAN
- Panel user interface features an LCD display with 15 control buttons
- Compact Flash (CF)—2 slots, for use with industry standard CF card readers to connect to Apple Mac® computers (HFS+ file system) or PCs (using user supplied 3rd-party software to mount HFS+ volumes). LED indicators show which slot is active.
- 12 Volt AC to DC adapter with industry standard 4-pin XLR connector (connects to the Mini via a connector located at the bottom of the unit)
- 3-year warranty

Software

- Remote Browser control software. When a Mac®, PC, or other device with web browser are connected via the Ki Pro Mini Ethernet port, the device can control the Ki Pro Mini via a web browser.
- Embedded internal web server for remote control via LAN

Options

- Stand—allows placing Ki Pro Mini on a desktop or other horizontal surface. The stand comes with a 45-degree DC power adapter that plugs into the bottom of the Ki Pro Mini, makes a 45-degree turn and exits out the connector side of the unit, mating with the supplied Ki Pro Mini AC adapter plug.
- Mounting Adapter Plate—this plate can be connected to either side of Ki Pro Mini, providing a multitude of mounting hole patterns designed to mate with industry standard battery plates, hot shoe adapters and other camera accessories.

Apple ProRes 422 Advantages

Data rates: 220 Mb/second Apple ProRes 422 (HQ), 145 Mb/second Apple ProRes 422, 100 Mb/second Apple ProRes 422 (LT), and 36 Mb/second Apple ProRes 422 (Proxy).

Note: Apple ProRes 422 (Proxy) is for high-quality offline editing at the original frame size, frame rate, and aspect ratio. Apple ProRes (LT) is not considered full quality when compared to ProRes or ProRes (HQ).

Quality: Excellent, broadcast quality

Captured media is virtually indistinguishable from pristine uncompressed sources. Better yet, ProRes maintains the quality during editing, surviving multiple encoding/decoding generations without degradation. It was designed by Apple for editing, rather than as a transmission/distribution codec as are most popular codecs. Some of the advantages include:

- Full-size 1920-by-1080 and 1280-by-720 HD resolutions.
- Full-size 720-by-486 and 720-by-576 SD resolutions.
- 4:2:2 chroma sampling. Provides precise compositing and blending at sharp saturated-color boundaries.
- 10-bit sample depth. Preserves subtle gradients of 10-bit sources (perfect for green-screen compositing, graphics or color correction) with no visible banding artifacts.
- I frame-only encoding. Ensures consistent quality in every frame and no artifacts from complex motion.
- Variable bit-rate (VBR) encoding. “Smart” encoding analyzes the image and allocates more bits to complex frames.
- Low data rate requirements make for more storage options and require less drive space to store high quality video.
- Optimized for efficient Real-Time effects

What’s In The Box?

When you unpack your Ki Pro Mini, you’ll find the following components:

- Ki Pro Mini CD-ROM—this CD contains documentation—including this manual you’re reading (PDF format).
- Ki Pro Mini QuickStart Guide—contains brief instructions to a first time user to get the unit up and running quickly.
- Ki Pro Mini Recorder.
- AC Adapter 110/220 with industry standard 4-pin XLR connector for supplying power to the Ki Pro Mini. A standard North American line cord with 3-prong plug is included.
- Registration Sheet—allows you to register by mail or online (details provided).

Please save all packaging for shipping the Ki Pro Mini should you wish to do so when moving or sending it in for service.

Ki Pro Mini Shipping Box Contents

Warning!

Only use attachments and accessories specified and/or sold by the manufacturer.

Warning!

Read and follow all warning notices and instructions marked on the product or included in the documentation.

Warning!

Do not use this device near water and clean only with a dry cloth.

System Requirements

The Ki Pro Mini records and plays Apple ProRes 422 QuickTime files to/from industry standard Compact Flash (CF) cards. Files are stored on the CF cards using the Apple HFS+ file system. This makes the cards readable on any Mac natively (using an attached CF card reader) and PCs using 3rd-party software that can read HFS+ formatted drives (MacDrive for example).

CF Card Recommendations

CF cards used must have a satisfactory level of performance. AJA recommends those cards listed on our website at:

http://www.aja.com/pdf/KiProMini_qualifiedCF_cards.pdf.

Ki Pro Mini Options

Mounting Plate

This option plate allows you to mount Ki Pro Mini to 3rd-party devices. The plate can be attached to the Ki Pro mini via 4 supplied screws; plates can be attached to either side or both sides of Ki Pro Mini. A large number of screw holes in the plate allows you to mate Ki Pro Mini to 3rd-Party battery plates, hot-shoe adapters and other mounting applications.

Stand and Adapter Cable

This stand securely holds the Ki Pro Mini upright on a desk, shelf, or any flat surface. A right angle power cable is provided for easy connection between the standard Ki Pro power supply and the Ki Pro Mini.

In This Manual

Chapter 1 is the introduction you're reading, listing features, box contents, and system requirements.

Chapter 2 gets you started with Ki Pro Mini, introducing the operator side controls and connector side features.

Chapter 3 provides complete instructions for operating the Ki Pro Mini from the Operator side controls and LCD display.

Chapter 4 discusses remote web browser control of Ki Pro Mini via Ethernet.

Appendix A lists specifications.

Appendix B safety and compliance information.

Chapter 2: Getting Started

Overview

When using Ki Pro Mini, you'll make media cable connections to a variety of equipment based on how it's being used. Chapters 2 and 3 discuss how to operate and use the Ki Pro Mini in its many configurations—this chapter introduces the operating configurations, power supply options, plus all indicators, controls, and connections so you'll have a working knowledge of how it can be used to tie together the worlds of acquiring media (production) and post-production.

Learning about the front panel indicators will be useful in selecting operational modes and monitoring what is happening on Ki Pro Mini as well as troubleshooting problems that can occur. Becoming familiar with the Ki Pro Mini operator-side and connectors will simplify installation, setup, and operation of the system.

On the following pages are front and rear panel illustrations with notations that summarize all of the connectors and indicators. Detailed descriptions of each of the connectors and indicators follow afterward.

Caution!

The AJA Ki Pro Mini contains a lithium battery soldered in place permanently (it is not user replaceable). If you ever dispose of the Ki Pro Mini, ensure you follow local regulations for safe disposal. The lithium battery shall not be exposed to excessive heat, such as sunshine or fire.

Controls and Connectors

Ki Pro Mini Operator Side (front panel)

Operator Side

The Operator Side of Ki Pro Mini features a variety of buttons, knobs, jacks, and indicators for operating Ki Pro Mini directly. Each of the items found on the "Operator Side" are described here and on the following pages. This side is referred to as the "Operator Side" because when mounted to a camera, it matches the operator side of the camera. When controlling camera features, you'll also be looking at all the Ki Pro Mini control features for ease of use.

The front panel of Ki Pro Mini operates in two modes: the "TRANSPORT" mode (default), and the "MENU" mode. Some controls have different functions in these two modes. The TRANSPORT mode (shown above) controls basic play, record, clip select, etc. functions. The MENU mode is for set-up and configuration of Ki Pro Mini. There are three menu groups: STATUS, CONFIG, and MEDIA - these menus are accessed by depressing the corresponding Menu buttons on the left of the panel.

Buttons

Power ON/OFF Button—Controls system power on/off and shows whether power is ON (when illuminated) or OFF. To turn power on, press the button once. It isn't necessary to press hard or depress the button—it's a "soft" button sensed by the processor inside. When OFF, and the button is touched, it will begin powering up and display start-up progress on the alphanumeric display.

To power down, you must press and hold the power button down for 2 seconds. This action prevents accidental power-off during normal operation. When the unit is powering down you can abort the power-down process by simply removing your finger from the power button before 2 seconds have elapsed.

STATUS Button—Pressing the STATUS button, when not lit, enters the Status menu and displays an Idle, Record or Play display. Pressing STATUS when it is lit turns off the Status menu and returns you to Transport mode. STATUS menus can be accessed at any time—including when the machine is in an active transport mode. The ALARM state displayed on the display shares functionality with STATUS. The Select buttons can be used to cycle through alarms and I/O status. All menus and front panel operations are described in Chapter 3.

CONFIG Button—Pressing CONFIG when not lit, enters the CONFIG menu. Pressing CONFIG when it is lit turns Off the CONFIG menu (returning you to the default TRANSPORT menu). The CONFIG menu can only be entered from the STOP mode. The CONFIG menu remembers which parameter it is set to when exited, and will return to that same parameter when the menu is re-entered.

MEDIA Button—Pressing MEDIA when not lit, enters the MEDIA menu. Pressing MEDIA when it is lit will turn Off the MEDIA menu (returning to the default TRANSPORT menu). The MEDIA menu can only be entered from the STOP mode. The MEDIA menu remembers which parameter it is set to when exited, and will return to that same parameter when the menu is re-entered.

Transport Control Buttons—The transport buttons are always active.

STOP ■: The STOP button has a dual function. When playing back a clip (PLAY, FF, or REV) the first push of STOP acts as a "pause" mode: the playback is paused, the current point of the clip is displayed, and the STOP button flashes. A second push of STOP completely stops the playback and directs Ki Pro Mini's outputs into an "E to E" mode (the currently selected inputs bypass to the outputs). To determine at a glance if the STOP button is in a "pause" mode, note that the stop button will flash if media playback is paused. The STOP button is fully illuminated in "stop" mode.

PLAY ►: Press PLAY to begin forward playback of the current clip at normal speed.

RECORD ●: Press the red button to begin recording. Once in RECORD mode, all other transport buttons are locked-out except the STOP button.

FFWD ►►: Press button to begin fast playback of the current clip at 2x speed. Successive pushes increase the speed to 4x, 8x, and 16x. (Pushing the button after 16x speed is reached has no further effect.) When fast-forwarding, audio is muted.

REV ◄◄: Pressing REV when not lit, begins playback of the current clip in reverse at 1x speed. Successive pushes increase the speed to 2x, 4x, 8x, and 16x. (Pushing the button after 16x speed is reached has no further effect.) When playing in reverse, audio is muted for all speeds.

SELECT (up/down): The SELECT up/down buttons operate differently depending on whether Ki Pro Mini is in the TRANSPORT mode or the MENU mode. In the TRANSPORT mode, the SELECT buttons select clips and operate like “previous” and “next” keys. When a clip is selected, Ki Pro Mini “cues” it to the beginning. Note that ordering and playback of clips is based on timestamp order (creation date), not clip name. In the MENU mode, the SELECT buttons select parameters for adjustment. Holding down either of the SELECT buttons causes them to repeat.

ADJUST (up/down): The ADJUST up/down buttons operate differently depending on whether Ki Pro Mini is in TRANSPORT mode or MENU mode. In TRANSPORT mode, and in the “Pause” mode (single push of STOP from PLAY mode), the ADJUST buttons “single step” the current clip at a rate of one frame per button push (up=forward, down=reverse). In the MENU mode, the ADJUST buttons adjust the selected parameter. Holding down either of the ADJUST buttons causes them to repeat

DELETE CLIP Button—Dedicated button that when pressed, deletes the currently selected clip. When pressed, the system displays a precautionary “ARE YOU SURE?” prompt. Press the up-arrow ADJUST button to say “Yes” and delete the clip, or the down-arrow ADJUST button to abort the deletion. When a clip is deleted, the next clip is then cued for deletion. Pressing DELETE CLIP, STOP or any other button—while the “ARE YOU SURE” prompt is displayed—cancels the delete operation. Pressing any button other than up-arrow ADJUST always aborts deletion.

DELETE CLIP can be used in either the TRANSPORT menu or the MEDIA menu. When pressed in the TRANSPORT menu with a current clip active (PLAY, REV, FF, RECORD), the active mode will continue until the DELETE CLIP is confirmed.

SLOT Button—The SLOT button serves two purposes. First, it selects which Compact Flash (CF) card is accessed by the system—either CF slot 1 or 2. Second, the SLOT button is used to unmount a currently selected CF card.

Caution!

Not using the SLOT button to unmount the media **can lead to issues with the media if the media is removed** prior to this action.

Pushing the slot button cycles between unmounting media and selecting media. This function is only active when in the “STOP” mode and requires a “PRESS STOP” if not stopped. After you select a slot, the system returns to the last selected clip and timecode for that slot. If the media has been changed since the slot was last selected (physically removed/media replaced), then the “first” clip on the media will be “cued” to its start point. If inserted media has any issues, additional prompts may be displayed as appropriate such as: “WARNING Backup and Reformat” or “WARNING Media Unformatted.”

Note: On power up, CF slot 1 is the initial storage system accessed by Ki Pro Mini.

CF Slot Release Buttons—Next to each CF slot is a push-to-eject button for removing the CF card. The push-to-eject button should only be pushed after the CF card has been unmounted.

Caution!

Removing a CF card with the slot LED lit, or while flashing, **can result in corrupted media** or potential damage to the CF card media.

Analog Audio Input Level Adjust Knobs—Knobs underneath the VU meters allow you to adjust the analog input levels for each of the two audio channels.

Note: Digital audio via embedded SDI and HDMI is not affected by the adjustment knobs.

To adjust an analog audio level, press the knob inward and the knob will then pop out for easy adjustment. This feature allows the knobs to be recessed, preventing accidental changes in a production environment.

Head Phone Volume Knob—To adjust headphone listening level, press the knob inward and the knob will then pop out for easy adjustment—just like the audio input level knobs.

Displays and Indicators

Alphanumeric and Graphics LCD Display: 3 line display that shows menus, status, alerts and other information. All menus are designed to fit into this format—some words may be truncated to fit the display limits.

VU Meters—7-segment LEDs show audio input levels for the 2 analog audio channels (respectively). Knobs underneath the VU meters allow you to adjust the input levels independently to prevent clipping and ensure proper signal amplitude.

Green—audio source signal level is in the “safe” area (no clipping). Vertically, the green LEDs also show the signal strength, so you can see if the signal level is low. Generally, it’s preferred to have the signal near the top of the green or even occasionally peaking into the yellow LEDs.

Yellow—audio source signal levels are at the peak edge of the safe area before clipping will occur.

Red—audio source amplitude is too hot and the signal is clipping at its signal peaks. You should reduce the input gain at its source (camera, mixer or source equipment supplying the signal).

CF Card LED Status Indicator—The following states for the LED indicators denote the status of the CF media:

LED lit/on: selected media

LED unlit/off: inactive media, okay to eject or no media inserted

LED flashing: recording in progress

Head Phone Jack—1/8” (3.5mm) miniature stereo TRS connection for standard stereo headphones.

Connector Side

Connect any digital camcorder, camera, or A/V source, regardless of brand or format, to Ki Pro Mini's SDI or HDMI connectors. The connector side of Ki Pro Mini contains all the connectors except for power. On the bottom of the unit is a single power connector for supplying the 12-Volt DC operating voltage (see *installation* later in this chapter).

The function of Ki Pro Mini's inputs and outputs depend on the operational mode. Ki Pro Mini's active input (the one to be recorded) is selected by front panel or web browser. Ki Pro Mini's outputs are active all the time. In other words, the same output video appears simultaneously on the HDMI and SDI outputs.

Ki Pro Mini Connectors

Connections

- HDMI—v1.3 video with embedded audio (2 channels input, 8 channels output), 1x connector for input and 1x connector for output.
- HD/SD-SDI Input and Output, with 8 channel embedded audio (2x BNC)
- 2 channel balanced analog audio Inputs (2x XLR)
- Line/Mic Level Switch (analog XLR audio input level)
- LANC loop (for external control)
- LTC Input (BNC)
- 10/100/1000 Ethernet LAN

LTC Timecode Input

One BNC provides connection to the house LTC timecode generator or source. This connection is high impedance.

SDI Input and Outputs

Two BNC connectors are provided for SDI input and output. SDI input and output supports SD-SDI and HD-SDI video and embedded 24-bit digital audio. If your camera has multiple outputs, look to see if it has SDI, and use it where possible for the highest quality.

HDMI

Two HDMI connectors provide for input and output of HDMI compatible video (version 1.3) and multi-channel embedded audio. HDCP is not supported on either input or output; only original material, such as that generated by a camcorder, is an acceptable HDMI source. The HDMI input is designed to support long cable runs: up to 100 feet (30.48m) when using 22 or 24AWG HDMI cable, or up to 50 feet (15.24m) using 28 or 30AWG HDMI cable. The HDMI output supports standard HDMI cables only.

HDMI Formats supported:

525i 29.97
625i 25
720p 50, 720p 59.94, 720p 60
1080i 25, 1080i 29.97, 1080i 30
1080p 23.98, 1080p 24, 1080p 25, 1080p 29.97

Note: When using Ki Pro Mini HDMI connections and attaching it to any HDMI audio or video accessory, you must use one each of the ferrite beaded HDMI cables, HH-28F-06, between the input and output ports of the Ki Pro Mini and the HDMI accessory to maintain regulatory compliance.

Analog 2 Channel Balanced Audio Input

Two XLRs, (female), provide 2 channels of balanced audio. Audio is high-quality 24-bit A/D input at 48kHz. Level adjustments are made via software and a switch for line-level inputs. Software level adjustments for analog audio (parameter 4.1) apply to balanced audio (XLR) using the “Line” setting on the switch. The Mic and Mic +48 settings offer a lower input level suitable for microphones and their associated input impedance. Use Mic +48 for microphones with phantom power (condenser mic.), or Mic for microphones without phantom power (dynamic microphones).

Ethernet

An RJ45 connector provides a 10/100/1000 Ethernet port for connecting Ki Pro Mini directly to a computer or Ethernet hub or switch for connecting to a LAN. Ki Pro Mini is compatible with CAT-5 straight-through or cross-over Ethernet cables, automatically detecting which is used. Once connected and properly configured, Ki Pro Mini can then be controlled by a web browser on the LAN.

LANC Loop

This connector accepts a LANC plug (2.5mm 3-conductor TRS jack) and then loops it through to a second connector (loop). LANC or Local Application Control Bus System (sometimes called Control-L) is a Sony protocol for synchronizing cameras. Available on many brands of cameras, LANC enables accessories to control camera and Ki Pro Mini record/stop functions.

Power Connector

On the underside of Ki Pro Mini is a standard 4-pin male XLR connector for supplying 12-Volt DC power to the unit. You can use either the supplied AC Adapter or furnish your own battery source. Since the connector is an industry standard pinout, choices are varied and flexible. Many 3rd party vendors offer products using this standardized power connector.

Pin 1: -
Pin 4: +
Pins 2 and 3: not used

Warning!

Ki Pro Mini has no user-serviceable parts. To remove power from the unit, remove the 4-pin XLR power connector to ensure disconnection. Refer all servicing to qualified service personnel. Servicing is required when the device has been damaged in any way, such as power-supply cord or plug is damaged, liquid has been spilled or objects have fallen into the device, the device has been exposed to rain or moisture, does not operate normally, or has been dropped.

Warning!

Do not defeat the safety purpose of the polarized or grounding-type plug. A polarized plug has two blades with one wider than the other. A grounding type plug has two blades and a third grounding prong. The wide blade or the third prong are provided for your safety. If the provided plug does not fit into your outlet, consult an electrician for replacement of the obsolete outlet.

Warning!

Since the Mains plug is used as the disconnection for the device, it must remain readily accessible and operable.

Warning!

Protect the power cord from being walked on or pinched particularly at plugs, convenience receptacles, and the point where they exit from the device.

Storage

Record media to industry standard removable Compact Flash (CF) card modules. CF cards are formatted for the Mac HFS+ file system so they mount on your OSX desktop for immediate editing and file access when plugged into a 3rd-party CF card reader.

Caution!

Failure to properly mount or dismount CF media, or an unexpected loss of power while recording, can result in an unrecoverable data loss.

Formatting Media

To format CF card media, it must first be inserted into an empty slot on Ki Pro Mini and/or selected using the SLOT button (see previous topic). Once the media is selected, follow these steps:

1. For media that has never been used in a Ki Pro Mini before, the "Warning Media Unformatted" prompt may appear.
2. Press the STOP button
3. Press the MEDIA button

4. Press SELECT (up or down) repeatedly until you see the menu *16.1 Format Media*.
5. Press ADJUST up arrow. Ki Pro Mini will display “FORMAT”. Press the ADJUST up arrow button. Ki Pro Mini will display a confirmation screen prior to erasing that will ask you to press and hold the ADJUST up arrow button for 2 seconds or longer before formatting will begin. Not selecting and holding the ADJUST up arrow or selecting any other key will abort the format operation. Once the media finishes formatting, a completion confirmation prompt is presented. Press STOP to return to regular operation.

Using Ki Pro Mini Media in Final Cut Pro

When a Ki Pro Mini CF card is removed and connected to a Mac via a 3rd-party CF card reader (user supplied), the CF card will mount as a normal Apple HFS+ filesystem. The REEL NAME parameter is the name of the media that will appear mounted on the OSX desktop.

Once a CF card is mounted, each clip recorded by Ki Pro Mini will be a file on its filesystem, which can be opened in Final Cut Pro. Because the clips were recorded as Apple ProRes 422, Apple ProRes 422 (HQ), Apple ProRes 422 (LT), or Apple ProRes 422 (Proxy) with proper Final Cut Pro metadata, they're instantly ready to edit.

In Final Cut Pro's browser window you will see some of the information Ki Pro Mini saved as data to describe the media. Ki Pro Mini saves the “Name,” “Media Start,” “Media End” and “Reel” for Final Cut Pro.

Note: while Ki Pro Mini recorded files can be directly imported into Final Cut Pro for editorial, AJA advises transferring/copying media to a local drive or disk array for editing.

Installation

The following topic details set up and installation of Ki Pro Mini. Choices you will make include how Ki Pro Mini will be controlled (front panel or Ethernet & web-browser) and the physical system requirements for your application.

Warning!

Do not install near any heat sources such as radiators, heat registers, stoves, or other apparatus (including amplifiers) that produce heat.

Warning!

Do not block any ventilation openings. Install in accordance with the manufacturer's instructions.

Warning!

Unplug this device during lightning storms or when unused for long periods of time.

Warning!

Refer all servicing to qualified service personnel. Servicing is required when the device has been damaged in any way, such as power-supply cord or plug is damaged, liquid has been spilled or objects have fallen into the device, the device has been exposed to rain or moisture, does not operate normally, or has been dropped.

Desktop Mounting

When using Ki Pro Mini on a desktop, you can simply lay the unit on a desktop or flat surface—or for a low-footprint, purchase a Ki Pro Mini stand kit to locate the Ki Pro Mini vertically on the desktop. The stand comes with a power adapter cable having a 90 degree connector so the power cord can run underneath the Ki Pro Mini, exiting to the rear of the stand. The optional stand comes with 2 mounting screws and a 90 degree power cord adapter.

Kit Contents

Detail View of Power Cable Under Unit

Ki Pro Mini in Stand

Optional Ki Pro Mini Stand Kit

Camera Mounting

Camera mounting requires the use of either user-provided brackets or use of one or more AJA optional Ki Pro Mini mounting plates. The AJA mounting plate option is a single aluminum plate unit with recessed mounting holes that have been matched for mating with a wide array of 3rd-party mounts, battery plates, and accessories.

Kit Contents

Example: Two mounting plates attached to a Ki Pro Mini

Optional Ki Pro Mini Mounting Plate, with Screws (supplied)

The optional Ki Pro mounting plate—or “cheese plate”—has been pre-drilled to accommodate a wide variety of user preferred mounting options such as a V-mount, Camera Rod system, or hot shoe adapter. To extend your mounting options and use the Ki Pro Mini itself as a mounting point for other 3rd Party devices like batteries or wireless mics, simply order a second Mini Mount and attach your 3rd party device to it.

Camera Mounting Examples Using Optional Mounting Plate

Applying Power

The installation and set up of a Ki Pro Mini is straight-forward. If you'll be controlling the unit from the front panel buttons and display, it's ready right out of the box. Just cable the system's audio and video sources, VTR(s), monitors, and audio equipment, mount the Ki Pro Mini unit as desired, and begin recording. However, if you wish to control Ki Pro Mini from a web browser, then there are additional configuration steps necessary.

Warning!

Since the Mains plug is used as the disconnection for the device, it must remain readily accessible and operable.

Warning!

Protect the power cord from being walked on or pinched particularly at plugs, convenience receptacles, and the point where they exit from the device.

Warning!

Unplug this device during lightning storms or when unused for long periods of time.

Warning!

Do not open the chassis. There are no user-serviceable parts inside. Opening the chassis will void the warranty unless performed by an AJA service center or licensed facility. Remove the supplied AC line cord from mains power when moving the unit. Do not defeat the safety purpose of the grounding-type plug.

Using AC Power

To begin using Ki Pro Mini, plug the 4-pin XLR on the supplied AC adapter into the XLR power socket on the back of Ki Pro Mini. Then plug the AC adapter line cord into 110 VAC or 230 VAC (the supply is autosensing). As mentioned earlier, if you're using the optional desktop mounting stand, you'll also use the supplied 90 degree power cable adapter with the Ki Pro Mini AC adapter.

1. Locate Line Cord

2. Insert into DC supply

3. Insert 4-pin XLR into 12Vdc Ki Pro Mini power socket.

Using DC Power

To run Ki Pro Mini on DC power, simply plug a 3rd-party industry standard 12 volt battery pack with a 4-pin female XLR connector into the power connector on Ki Pro Mini (underneath unit). The battery should be capable of supplying a sustained 3.3 A (just like the supplied AC Adapter provides). Such battery packs are available from a variety of sources.

Notes: To operate Ki Pro Mini properly, batteries should not have voltage lower than 12 volts and should not have voltage that exceeds 18 volts.

Ki Pro Mini is a low-wattage device so many batteries can power Ki Pro Mini for several hours at a time.

In the event of sudden power loss, recordings that are in progress will not be written properly to the media. Note that there is a "Low Battery" warning prompt that users should take note of and stop recordings in progress if at all possible before battery failure. Ki Pro Mini can sometimes manage to close the file before the battery stops providing sufficient power, but this is not always possible due to the nature of some batteries and the duration of some recordings. It is best to be mindful of remaining battery life. The use of batteries with metering or remaining power indications is highly recommended. For very long recordings, it is advisable to use the supplied AC power supply instead of battery power.

Remote Network Control

LAN Connection

Direct Ethernet Connection

Ki Pro Mini Networking Examples

Network Connections

Ki Pro Mini can be networked directly to a MacBook Pro or Mac using a single Ethernet cable (straight or cross-over)—or it can be connected to a local area network (LAN).

In hard-wired configurations, Ki Pro Mini connects via its 10/100/1000 Base-TX Ethernet connector. In a direct connection, you simply connect the Ki Pro Mini to an Ethernet-equipped computer having a browser using a CAT-5 cable. If connecting via a LAN, you then connect the Ki Pro Mini's Ethernet connector to a hub or switch on the LAN. A LAN is a shared network that includes other Ethernet devices all attached via a hub or digital switch. LANs may be divided into zones separated by software or hardware routers.

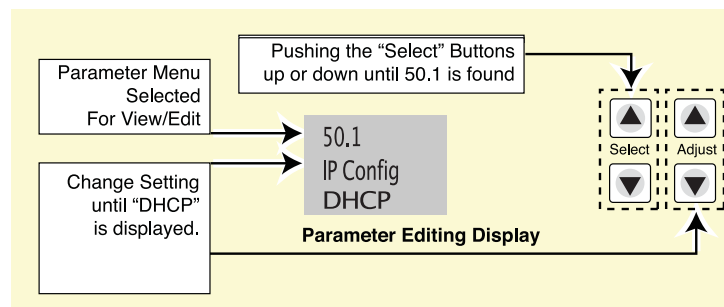

Devices on a LAN have IP addresses which may be fixed and permanent, or dynamically assigned by the network (DHCP). When attaching Ki Pro Mini to a LAN, you should first talk to your network administrator and find out how they want it connected (static IP or DHCP). Your IT department will be able to supply the information you need to install Ki Pro Mini on a LAN.

TCP/IP Information You'll Need

If your LAN has a DHCP server that assigns IP addresses dynamically, then you don't have to configure anything (Ki Pro Mini defaults to DHCP). If for some reason your IT administrator prefers an assigned IP address that is fixed (called a "static IP"), then get the IP address—you'll be entering it in the "IP CONFIG parameter." If your LAN requires static IP addresses, then also ask your IT administrator for the *Subnet Mask* and *default gateway* IP address (your LAN's internet router). The following two topics discuss two different ways to set up Ki Pro Mini: via DHCP or via a static IP address.

Networking via DHCP

The default configuration (from the factory) automatically looks for a DHCP server to issue an IP address. So, as long as your network has a DHCP server (usually part of your router), then you need to do nothing other than plugging the Ki Pro Mini into the net. To manually select DHCP: use the Select buttons to navigate to the parameter "50.1 IP CONFIG," and then use the Adjust buttons to select "DHCP." That's it!

Here are the steps to communicate with Ki Pro Mini after choosing the DHCP selection:

1. Use the Select buttons to navigate to parameter 50.2. Note on a piece of paper the DHCP supplied IP address shown.
2. With your laptop or desktop computer connected to the same LAN and DHCP enabled, type the IP address you noted in step 1 into the browser address bar. You should now see Ki Pro Mini's browser status screen.

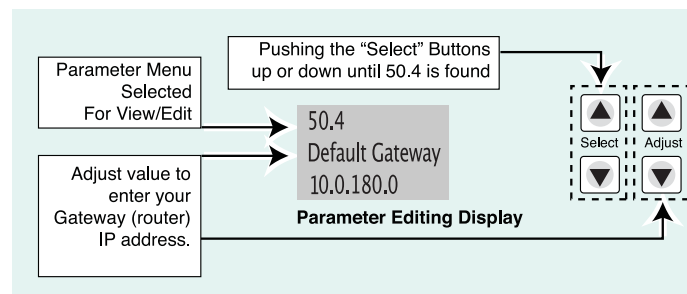

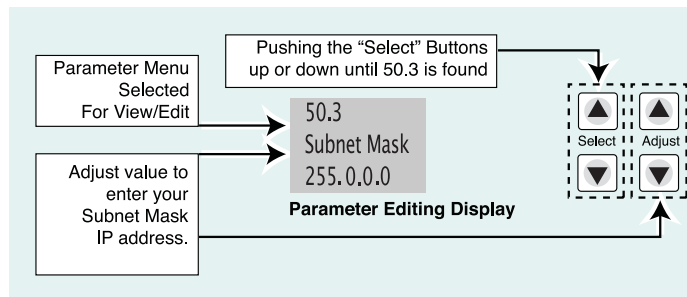

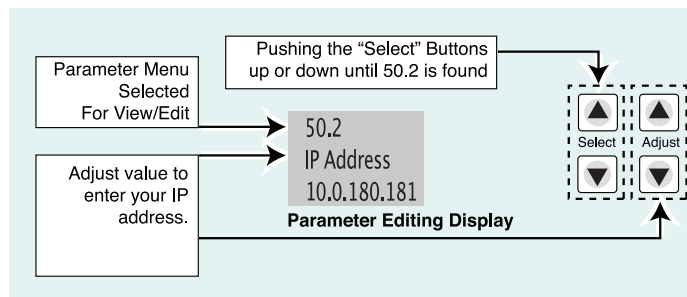

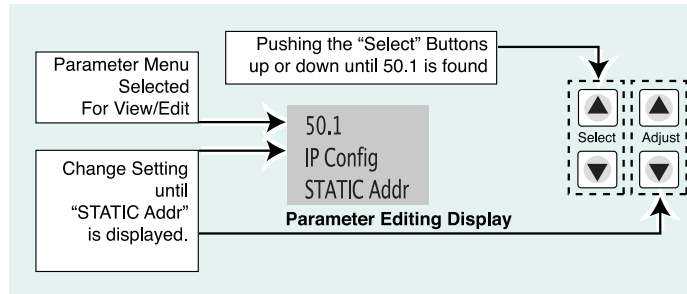

If Ki Pro Mini cannot get an address from the DHCP server on the LAN while Ki Pro Mini is set to DHCP via parameter 50.1, it will then automatically drop back to a preset factory IP address of 192.168.0.2. In this instance you can follow these alternate steps to communicate with Ki Pro Mini:

1. Set the computer's Ethernet IP address to 192.168.0.n (where n is not 2).
2. Set the computer's Subnet mask to 255.255.255.0 (most computers default to the proper netmask when the address is set).
3. Run a browser on the computer and type "192.168.0.2" (the factory fallback IP address). You should now see Ki Pro Mini's browser status screen.

Note: If Ki Pro Mini fails to find a DHCP server via it's network connection, it will fall back to using the factory default static IP of 192.168.0.2—or whatever IP address you've previously defined. AJA recommends you define a Static IP address with parameter 50.2 so you'll be prepared in the event your DHCP server fails.

Networking Ki Pro Mini using a Static IP Address

To set a static IP address for Ki Pro Mini, you'll have to make some simple Parameter menu selections. The illustration below shows the four menu selections you need to make, while entering the information provided to you by your IT administrator (as discussed earlier).

1

2

3

4

Note: for parameters 50.2, 50.3, and 50.4, you will be setting IP addresses that consist of "octets" separated by a period (i.e., 10.0.180.0).

For these parameters, the *Select* button selects the octet and then the *Adjust* buttons select the desired number. Pressing *Select* again advances to the next octet. At the final octet, the address will flash—pressing *Select* at that point confirms the setting.

Configuring Ki Pro Mini with a Static IP Address

Networking Ki Pro Mini using the Factory Default IP

If you don't want to use DHCP to network Ki Pro Mini and also don't want to set your own static IP address, you can simply use a Default setting to use a factory setting of 10.65.74.65. This might be useful for an application where you directly connect a laptop or computer to Ki Pro Mini and want to get networking quickly. Here are the steps to set up this method of communication:

1. Use the Select buttons to navigate to parameter "50.1 IP CONFIG", and then use the Adjust buttons to select "Default".
2. Set your laptop or desktop computer Ethernet IP address to 10.m.n.m (where m is not 65 and n is not 74).
3. Also on the computer, set the Subnet mask to 255.0.0.0 (most PCs default to the proper netmask when the address is set—so you may not have to do anything here).
4. Run a browser on the computer and type "10.65.74.65" (the *Default* factory IP address). You should now see Ki Pro Mini's browser status screen.

Test Ki Pro Mini's Network Connection with "Ping"

After setting the IP address and other TCP/IP settings and connecting Ki Pro Mini's Ethernet connection to a LAN or directly to a computer, ensure that you have a valid connection by "Pinging" the Ki Pro Mini. Pinging ensures that other devices on the network, or a computer directly attached to it, can see it. Simply run the Ping utility from a computer on the same LAN as Ki Pro Mini, or one attached directly to Ki Pro Mini. Here's how to Ping a Ki Pro Mini from a Mac OSX computer:

Mac Ping Procedure

1. Find the Applications Folder, and then find the Utilities Folder inside of the Applications Folder.
2. Locate the "Terminal" utility application and double-click it.
3. On the Ki Pro Mini, go to parameter menu 50.2 and read the IP address.
4. At the Terminal prompt, enter the IP address noted in step 3. For example: ping 192.168.0.2
5. If successful, the ping utility will respond that packets were sent, received and how long it took. For example:
64 bytes from 192.168.0.2: icmp_seq=0 ttl=64 time=0.590 ms
6. If unsuccessful, check Ki Pro Mini's network settings and resolve the problem with your IT administrator.

Controlling Ki Pro Mini from a web-browser

To control Ki Pro Mini from a web-browser on a network attached computer, you must enter Ki Pro Mini's IP address as a URL in the browser. For example, if Ki Pro Mini's IP address were "10.0.6.31", you would then type into the web browser: http://10.0.6.31

This topic is explained in greater detail in *Chapter 4: Browser Remote Control*.

Chapter 3: Front Panel Operation

There are two ways to control Ki Pro Mini: from the front panel or remotely from a web browser connected via the Mini's ethernet RJ45 connector. This chapter discusses controlling and using Ki Pro Mini from its front panel. (Remote control via browser is discussed later in Chapter 4.)

In Chapter two we discussed the panel controls overall, so ensure you've read and understand that material first. Here in this Chapter we introduce each of the front panel's modes and menus—plus talk about *Clips* and *Reels*, with procedures for basic use.

First we introduce the two basic front panel modes, TRANSPORT and MENU, followed by how the SELECT and ADJUST buttons operate in each of these two panel modes.

The TRANSPORT mode is the default mode—it controls basic PLAY, STOP, FF, REV, etc. functions. In the TRANSPORT mode, the Select buttons (up or down) cycle through the clips in the currently selected storage slot (like previous/next), and the Adjust buttons allow single-stepping, frame forward or backward.

Line 1: Displays the current clip.

Line 2: Displays the current reel number and the current slot selected.

Line 3: Displays the timecode for the clip being recorded or played as well as the percentage of the media capacity remaining.

An example display for the TRANSPORT mode (default screen) is shown below:

SC26ATK12	
REEL 001	S1
01:04:23:10	47%

For the MENU mode, depressing one of the 3 MENU buttons (STATUS, CONFIG, or MEDIA) will enter the corresponding menu.

In the STATUS menu, the Select buttons will cycle through the various STATUS screens. The Adjust buttons have no effect on the STATUS menu. The display for the STATUS menu is shown below:

REC	Slot Selected
Recording Format	Framerate
ProRes	ProRes Type

STATUS Menu (Record Mode)

PLAY	Selected Slot
Clip Format	Clip Framerate
ProRes	Clip ProRes Type

STATUS Menu (Play Mode)

In the CONFIG and MEDIA menus, the Select buttons select various adjustable parameters, and the Adjust buttons adjust the selected parameter. When entering a menu, the system remembers and returns to the last selected parameter. The display for the CONFIG and MEDIA menus is shown below:

Parameter Number
Parameter Name
Available Selections (chosen by Adjust buttons)

CONFIG Menu (Idle Mode)

Parameter Number
Parameter Name
Available Selections (chosen by Adjust buttons)

MEDIA Menu (like CONFIG)

TRANSPORT Mode (default)

TRANSPORT mode is the default mode for Ki Pro Mini operation. When you power up Ki Pro Mini, the first display you'll see is TRANSPORT mode menu. Any clip that previously was recorded is referenced in the display and can be played.

Pushing one of the transport buttons in the middle of the front panel (PLAY, STOP, FF, REV, REC) immediately takes action and causes the display to change to the TRANSPORT mode if it is not already displayed. Settings you've made in the MEDIA menus are observed (more on that later). You'll always know you are in TRANSPORT mode as long as one of the MENU buttons aren't lit (STATUS, MENU, or MEDIA)—if one is lit, then you are in a "menu".

When in the "Idle" mode, the CONFIG and MEDIA set-up menus can be accessed to adjust various parameters that control Ki Pro Mini's operation.

Note that you must be in STOP, not PAUSE to access these menus—if you try to access these menus without first having stopped playback, a “PRESS STOP” prompt will appear on the LCD display. You can tell if the STOP button is in “pause” if the button is flashing.

There are certain times when transport controls are locked out. For example, when ejecting media, or entering an IP address, the transport controls are locked out until the operation is completed. Most other menu functions do not lock out the transport controls.

At any time you only need to hit any transport button to exit (or “exit” a STATUS, CONFIG, or MEDIA menu by pushing its button). Pressing a transport button sends the display into the TRANSPORT default menu.

Several operations may result in an “ARE YOU SURE” interaction; for example, FORMAT MEDIA. This protects you from inadvertent actions and ensures that accidental button presses don’t have negative repercussions. When you answer yes to an ARE YOU SURE prompt, the display then changes to an “in progress display”, and automatically returns to the menu when the operation is complete.

When recording, Ki Pro Mini is in an E-to-E state.

Certain parameters are stored in non-volatile memory so that the parameter is remembered between power cycles, for example: system name and date/time.

Recording a Clip

There is more than one way to record a clip since you can control Ki Pro Mini in numerous ways. The MEDIA and CONFIG menus presented later in this chapter detail the parameters you have to control recording. Before we get into that level of detail, here’s an example of just how simple recording can be:

1. Press the STATUS button. You’ll see the currently selected input and input format (line 1) and the chosen recording format and audio input (line 2). If these settings are acceptable, then push the red RECORD button below the display.
2. The green LED next to the CF card release button will begin blinking, showing that a recording is in process, and you’ll see the timecode changing on the display. The RECORD button is also backlit while recording.
3. When you’ve finished recording, press the STOP button.

You can, of course, customize your configuration via the CONFIG and MEDIA menu parameters.

Note: To change Apple ProRes 422 settings prior to recording: press MEDIA, then repeatedly press SELECT until you see 14.1 Encode Type—then press ADJUST up or down to select “ProRes 422LT”, “ProRes 422PX”, “ProRes 422HQ” or “ProRes 422”. Press MEDIA or STOP to exit the menu.

To select a different video input, press CONFIG, then repeatedly press SELECT until you see 2.1 Video Input—then press ADJUST up or down to choose a desired video input connector. To select a different audio input, use the SELECT up arrow button and you will see 2.2 Audio Input. Press ADJUST up or down to chose a desired audio input connector.

Note: You cannot select HDMI audio unless you have an HDMI video source, nor can you select a SDI audio source if you have not selected an SDI video source.

These are just a few menu parameters that you might wish to change before you make your recordings. To learn all the ways to convert formats on input or output read the CONFIG menu and MEDIA menu parameter topics later in this chapter.

Recording Notes

- Ki Pro Mini may take a few seconds to close longer files (files over 20 minutes). For these longer recordings, you may see a “Closing File” prompt on the display.

- Ki Pro Mini alerts you when the media is nearly full with a "Media Low" prompt at 15% of the remaining capacity. At 10% of the total capacity of the media, the "Media Full" prompt will appear. Any recordings that have been started will stop once 10% is reached and no further recordings can be performed using this media until it is formatted again or a MEDIA>Delete Clips>DELETE ALL has been performed. Pressing the DELETE CLIP button will also free up some space and allow further recording.

Playing Back a Clip

To playback recorded media, you simply select the clip desired and press PLAY. If the clip you wish to playback is not currently selected, use the SELECT up/down buttons until the clip name appears on the display. Like recording, there is more than one way to initiate playback (front panel or web browser). From the front panel these are the basic steps:

1. Press the STOP button to get to the TRANSPORT mode (if not already there). Find the clip name in the display (it shows the current clip/reel).
2. Press the SELECT up or down arrow button repeatedly until you find the clip you are looking for.
3. Press the PLAY button (▶).
4. When playing back a clip (PLAY, FF, or REV) the first push of STOP acts as a "Pause" mode: the playback is paused, the current point of the clip is displayed, and the STOP button will flash. A second push of STOP will completely stop the playback and Ki Pro Mini's outputs will go into an "E to E" mode (the currently selected inputs will be bypassed to the outputs). When a playback reaches the end of a clip, it will automatically pause on the last frame of the clip.

During playback you can use the FFWD, REV, SELECT, or ADJUST buttons as follows:

FFWD ▶▶: Press button to begin fast playback of the current clip at 2x speed. Successive pushes increase the speed to 4x, 8x, and 16x. (Pushing the button after 16x speed is reached has no further effect.) When fast-forwarding, audio is muted.

REV ◀◀: Pressing REV when not lit, begins playback of the current clip in reverse at 1x speed. Successive pushes increase the speed to 2x, 4x, 8x, and 16x. (Pushing the button after 16x speed is reached has no further effect.) When playing in reverse, audio is muted for all speeds.

SELECT (up/down): while in TRANSPORT mode, the SELECT buttons select clips and operate like "previous" and "next" keys. When a clip is selected it is "cued" to the beginning of the clip. Note that ordering and playback of clips is based on timestamp order, not clip name. If you have paused playback (the STOP button is flashing), you can use the SELECT down button to jump back to the beginning of the clip. If the STOP button is not flashing, depressing the SELECT down button will select the previous clip.

ADJUST (up/down): while in TRANSPORT mode, and in either a "STOP" or "pause" state, the ADJUST buttons will "single step" the current clip at a rate of one frame per button push (up=forward, down=reverse).

Deleting Clips

To delete a previously recorded clip:

1. In TRANSPORT mode, use the SELECT up and down arrow buttons to browse through the clips on the current CF card. When a clip is on another CF card you will press SLOT repeatedly until it's selected.
2. When you find a clip you want to delete, press the DELETE CLIP button.
3. Ki Pro Mini will ask "Are you sure" —press the ADJUST up arrow button to confirm deletion. Pressing the down arrow, or any other button, will abort the deletion.

STATUS menus

The STATUS menus display I/O status and Alarm information. The STATUS menu can be accessed almost anytime and will not change any active transport modes. Like the CONFIG and MEDIA menus, STATUS display screens can be viewed by pushing the SELECT up or down buttons. Pressing STATUS will exit the screens and return to TRANSPORT mode, where an action could still be occurring (like playback or even recording).

Record Mode (TRANSPORT)

As mentioned earlier in this chapter:

Line 1: Displays the current clip.

Line 2: Displays the current reel number and the current slot selected.

Line 3: Displays the timecode for the clip being recorded or played as well as the percentage of the media capacity remaining.

Alarm Status

The Alarm menu displays warnings and alarms. Some alarms will automatically be shown on the display. Others will only be seen by checking the STATUS displays (press Select up/down to cycle through them). If everything is OK, then a "SYSTEM NORMAL" message will be seen when you cycle through the STATUS displays.

Examples of ALARM displays are shown below. WARNING appears on the first line and the prompted action item on the second line.

WARNING
NO MEDIA

WARNING
MEDIA REMOVED

WARNING
MEDIA LOW

WARNING
DROPPED FRAMES

WARNING
A/V MISMATCH

WARNING
NO VIDEO INPUT

WARNING
INVALID
SELECTION

Warning Examples

You will be alerted to an alarm condition by having all backlit keys and the display flash to full intensity for 2 seconds. If more than one alarm state is active, then the display will hold each alarm notification for 3 seconds before cycling to the next alarm. These alarm notifications override whatever the display is currently showing for the TRANSPORT or STATUS menus.

Once there is a Ki Pro Mini alarm active (e.g. *Invalid Selection*) the STATUS button light will blink for as long as the alarm is present. This alerts you so you'll know the reasons for the alarm condition are still active—you can then press the STATUS button to determine what the alarm condition is.

CONFIG and MEDIA menus, once entered after an alarm notification, will cause the alarm display to go away. Pushing any button always returns Ki Pro Mini to its pre-alarm state—however, if the alarm condition still exists after this initial button push (i.e., the reason for the alarm), the alarm notification will reappear on the display. Note: the STATUS button will blink if there is an active alarm condition.

Ki Pro Mini features a variety of alarms to help you diagnose the condition of the unit, possible configuration issues, or possible signal issues. Here is a list of warning messages and their meaning:

- "WARNING Input Format Changed" prompt appears if a recording is started and the signal is lost or is changed. If this occurs, Ki Pro Mini stops the recording that is in progress.
- "WARNING Record Format" may appear if there is no video input to Ki Pro Mini. No recording will be performed in this state.
- "WARNING A/V Mismatch" may appear if SDI video is selected and HDMI audio is selected or vice versa. Embedded audio, via SDI or HDMI, must be matched to the video source. Analog audio can be used with any video input.
- "WARNING Dropped Frames" may appear if media is underperforming and cannot keep up with the data rate required to make a recording or perform a playback. If you see this prompt during recording, you might consider backing up your current recordings and formatting the media. For playback, you might simply re-attempt playback.
- "WARNING SDI VFR Mismatch" will appear if you have set the video input to something other than SDI when parameter 1.1 is set to "VFR"—as only the SDI input provides the appropriate data for VFR support.
- "WARNING Media Low" will appear when the media only has 15% of capacity remaining. Media must be switched out when it reaches 10% of capacity. With 10% of media remaining, the "WARNING Media Full" prompt will appear.
- "WARNING Media in Use" may appear if you try to remove the media by pushing the SLOT button while an operation is still taking place. Wait for the operation to finish and then try again.
- "WARNING Media Not Present" may appear if media has been physically removed and the user hits the slot button.
- "WARNING Media Unformatted" may appear if Ki Pro Mini does not recognize the file system on the CF card or the CF card has never been formatted.
- "WARNING Storage Removed" will appear if the CF media is removed without first hitting the SLOT button to properly unmount it. In the event this happens, a CF card immediately re-inserted into the Ki Pro Mini may show clips as "N/A" and subsequent recordings may not be possible. To resolve this issue, mount the CF card on an Apple computer under Mac OSX, then remove and re-insert the CF media into your Ki Pro Mini. If the CF card does not read properly, you will need to format it.
- "WARNING Backup and Reformat" may appear if CF media has issues being mounted by the Ki Pro Mini. As the prompt indicates, it is best to back up the media by copying it to another CF card, hard drive or disk array and then reformat the CF media. Some signs that the media is in a read-only state: even though clips have been recorded to the media, "N/A" appears in the clip area of the UI, "Loading" appears in the clip area of the UI but does not eventually load a clip, or hitting the record button with all settings correctly configured for the Ki Pro Mini does not result in a recording.
- "WARNING Name in Use" appears if the clipname specified in the naming parameters already exists on the CF card. This also happens when take 999 is reached and no more take numbers are available. Ki Pro Mini will refuse to overwrite the clip; you will have to delete the clip or select a new name.
- "WARNING Non VFR Format" appears if you choose VFR for 1.1 Record Type but no VFR data is detected on the video input.

“WARNING No Clip Name” appears if you attempt to record in gang mode using a non-existent custom clip name.

“WARNING No Video Input” appears if you attempt to record and there is no video detected at the video input.

“WARNING Genlock Missing” appears if you choose “Input” for 6.1 Genlock and you attempt to play a clip and no genlock is detected on the selected input.

MEDIA menus

As the name implies, these menu display choices are all related to media storage, the type of encoding, and how Ki Pro Mini behaves when recording and playing back. There are also menus for naming reels, clips and takes.

Media Menu Parameters

14.1 ENCODE TYPE

This parameter defines the Apple ProRes encoding method.

14.1 ENCODE TYPE	ProRes 422 (default) ProRes 422HQ ProRes 422LT ProRes 422PX	Record media as Apple ProRes 422 files. Record media as Apple ProRes 422 (HQ) files. Record media as Apple ProRes 422 (LT) files. Record media as Apple ProRes 422 (Proxy) files.
---------------------	--	--

15.1 PLAY MEDIA

This parameter determines behavior during playback.

15.1 PLAY MEDIA	One (default) All	Plays one clip and then stops playback Plays the current clip and then continues playing the next clip on the Ki Pro Mini media. Note that with this setting, Ki Pro Mini will play all clips back regardless of format or framerate—but you may notice the video monitor reset for format/framerate changes. If all clips are the same format and framerate or conversion is applied to the output for clips with the same Hz, then clips play out smoothly one after another.
--------------------	----------------------	--

15.2 LOOP PLAY

This parameter turns looped playback on and off.

15.2 LOOP PLAY	OFF (default) ON	Play clip(s) and then stop playback when complete Play clip(s) and then loop back and repeat playback
-------------------	---------------------	--

16.1 FORMAT MEDIA

This parameter is used to format the currently selected CF card.

16.1 FORMAT MEDIA	KEEP MEDIA (default) FORMAT MEDIA	No action (do not format the CF card selected) Format the selected CF card (you will be prompted Confirm Erase S1? or Confirm Erase S2?—Hold up Adjust button to confirm))
----------------------	--------------------------------------	--

16.2 DELETE CLIPS

This parameter can be used to delete all of the clips on the media.

16.2 DELETE CLIPS	KEEP CLIPS (default) DELETE ALL	No action (do not delete clips) Delete all clips on the storage device when DELETE CLIPS is pressed or Adjust up arrow is pressed and held for 2 seconds
----------------------	------------------------------------	---

Ki Pro Mini CF cards can be used to hold data other than Apple ProRes 422 QuickTime recordings. If other files are saved to a card, they should be placed outside of the "AJA" folder. Any material inside of the "AJA" folder will be erased if a MEDIA>Delete Clips>DELETE ALL is performed.

17.0 REEL NAME

This parameter determines the reel name associated with all clips generated while using this setting. The reel name is a number between 001 and 999. It is historically linked to the naming conventions used for film and tape-based media. The REEL NAME is an incrementing three digit value that works with EDLs. For this reason, the parameter does not have a "NONE" selection—all clips will be associated with a REEL NAME. The REEL NAME parameter is also the name of the media as it will appear when the CF card is mounted on a Mac OSX desktop (and media was formatted by the user).

17.0 REEL NAME	001 to 999 (default = 001)	Press ADJUST button up or down to change the REEL NAME value from 001 to 999.
-------------------	-------------------------------	--

17.2 CLIP NAME

This parameter determines the clip name associated with all clips generated while using this setting. The clip name is either "Clip" or "SC".

17.2 CLIP NAME	SC Clip (default)	Clips generated will have filenames beginning with "SC" Clips generated will have filenames beginning with "Clip"
-------------------	----------------------	--

Clip Naming—Two Examples

Two examples are presented below showing how resulting clip names are generated. Each example is based on the collective settings for these parameters:

- REEL NAME
- CLIP NAME
- CLIP NUMBER
- CLIP NUMBER APPEND
- ALPHA APPEND VALUE

In both examples that follow, "TK" is a default append to the naming convention just prior to the auto-incrementing TK value (which can be manually overridden via parameter 17.6 Take).

Ki Pro Mini offers these parameter choices for easy identification of the QuickTime files, so that the names can logically match the shooting script, and are acceptable when imported into the Final Cut Pro Browser window. Final Cut Pro's Browser window provides columns of data used to describe the media. In the most minimal form, "Name," "Media Start," "Media End" and "Reel" are required pieces of information for a Final Cut Pro clip to be properly perceived as "valid" media. Additional information or "QuickTime metadata" is useful and can be mapped into the myriad choices provided in the Final Cut Pro Browser column headings.

Example 1: using the factory default AJA parameter settings:

REEL NAME	001
CLIP NAME	CLIP
CLIP NUMBER	1
CLIP APPEND	Alpha
ALPHA APPEND	A

The resulting clip would be named and displayed as: "CLIP1ATK1". The media would be named "001" if mounted on the OS X desktop as a volume.

Example 2: using customized settings:

REEL NAME	002
CLIP NAME	SC
CLIP NUMBER	12
CLIP APPEND	ALPHA
ALPHA APPEND	B

The resulting clip would have the following naming convention: "SC12BTK1". The media would be named "002" if mounted on a desktop as a volume.

17.3 CLIP NUMBER

This parameter determines the clip number, from 1 to 999, that follows the CLIP NAME, and is associated with all clips generated while using this setting.

17.3 CLIP NUMBER

1 to 999
(default = 1)

Press ADJUST button up or down to change the CLIP NUMBER value from 1 to 999.

17.4 CLIP APPEND

This parameter is used with parameter 17.5 ALPHA APPEND to append a text value after the CLIP NUMBER or have no text appended.

17.4 CLIP APPEND	NONE	No text is appended to the CLIP NAME and CLIP NUMBER
	ALPHA (default)	The text value entered in ALPHA APPEND is appended to the CLIP NAME and CLIP NUMBER

17.5 ALPHA APPEND

This parameter is used with parameter 17.4 CLIP APPEND to append a text value after the CLIP NUMBER.

17.5 ALPHA APPEND	A to Z (default = A)	Press ADJUST button up or down to change the ALPHA APPEND value from A to Z. Alphabetic values increment with A and Z wrapping around.
----------------------	-------------------------	--

17.8 TAKE

This parameter determines the TAKE number, from 1 to 999, that follows the CLIP NAME and CLIP NUMBER, followed by any ALPHA APPEND (if selected), generated for all clips while using this setting.

17.8 TAKE	1 to 999 (default = 1)	Ki Pro Mini automatically generates a TAKE number. Press ADJUST button up or down to change the TAKE value from 1 to 999, if a value other than the automatically generated value is desired.
--------------	---------------------------	---

There are rules that Ki Pro Mini observes in relation to Clips and Takes using these standard naming conventions:

1. Ki Pro Mini will not overwrite an existing clip.
2. The Take number will auto-increment past existing numbers for the “prefix” as defined by the Reel Name, Clip Name, Clip Number, Clip Append, Alpha Append, and Take settings.
3. If the number is at “999”, Ki Pro Mini will record a clip with take 999, but then cannot auto advance so the second attempt to record will generate a “Name In Use” alarm. This prompts you to select a new Clip Name, Clip Number, Clip Append, Alpha Append, and/or Take settings so that a new unique “prefix” is created. This action ensures files are unique and understandable, and that clips are never overwritten.

Custom Clip Naming

Users can elect to give their clips names other than the standard criteria provided by AJA. **IMPORTANT:** Certain characters may not be allowed or supported if entered for a clip name. Examples include: punctuation marks (other than internal spaces or periods), special characters (like @), and non-ASCII UTF-8 characters are rejected outright. Note: non-UTF-8 characters appear in some languages, like Chinese and Japanese, and are not supported.

Custom clip names can be created via the front panel UI menu parameters (19.1, 19.2, and 19.4) through the use of the select and adjust up/down arrows. Users may find that the more efficient method to perform custom clip naming is via the web UI entry fields.

19.1 CUSTOM CLIP

This parameter enables or disables whether a custom clip name can be used via menu parameters 19.1, 19.2, and 19.4, or via the web UI.

19.1 CUSTOM CLIP	OFF (default) ON	Enable defining of custom clip name Disable defining of custom clip name
---------------------	---------------------	---

19.2 CUSTOM NAME

This parameter defines a custom clip name. The custom name is defined via the front panel select and adjust up/down arrows.

19.2 CUSTOM NAME	<i>variable</i>	Using the adjust buttons, enter a custom clip name. Using the adjust buttons and the top Select button, select the characters for the name. The adjust buttons scroll through the choices and the top Select button advances to the next character. While selecting characters, the character being changed will flash to show its position. Certain characters may not be allowed or supported if entered for a clip name. Examples include: punctuation marks (other than internal spaces or periods), special characters (like @), and non-ASCII UTF-8 characters are rejected outright. Note: non-UTF-8 characters appear in some languages, like Chinese and Japanese, and are not supported. <i>Default: CUSTOM</i>
---------------------	-----------------	--

19.4 CUSTOM TAKE

This parameter defines a custom take. The custom take number is defined via the front panel select and adjust up/down arrows.

19.4 CUSTOM TAKE	1 to 999 (default = 1)	Press ADJUST button up or down to change the TAKE value from 1 to 999, if a value other than the automatically generated value is desired.
---------------------	---------------------------	--

22.1 GANG CLIP NAME

This parameter is used when performing gang recording via multiple Ki Pros and/or Ki Pro Minis (refer to Controlling Multiple Ki Pros later in this manual). If the desire is to have clips named the same across all Ki Pro ganged units' recordings, then use the "Master Name" selection in this parameter. If the desire is to have clips named independently on Ki Pro units, then "Slave Name" should be selected. Selecting "Slave Name" means that the recording will take it's name from the individual Ki Pro's parameters and not accept the value pushed to the Slave by the Master Ki Pro.

22.1 GANG CLIP NAME	Master Name (default) Slave Name	Enable have clips named the same across all Ki Pro ganged units Name clips independently on Ki Pro units
------------------------	-------------------------------------	---

Note: Most gang controls are only available in the web user interface.

CONFIG menus

When we talk about menus, we discuss the Parameter Number and Name on the top line of the display and the Parameter Setting(s) possible as shown on the bottom line of the display; remember, the current setting is what is shown.

As in the MEDIA menus already presented, pressing one of the parameter *Adjust* buttons changes the current CONFIG parameter's value to a new one from the Ki Pro Mini's list of choices—repeating the list if you continue to press *Adjust*—or adjusting a numerical value up or down.

The exact choices displayed will vary depending on the parameter. Most adjustment choices made with the Adjust buttons take effect immediately and will be subsequently stored into the Ki Pro Mini's non-volatile memory if they remain unchanged for 3 seconds.

If a Select or Adjust button is held down continuously, the changes will begin to happen automatically - with acceleration if applicable.

Holding down both the Adjust (up) and Adjust (down) buttons—*at the same time*—will set that parameter back to its factory default value.

The CONFIG menu is for system set-up and configuration. Each parameter is numbered, just like the MEDIA menus.

CONFIG Menu Parameters

Many of the CONFIG menu parameters are used together to configure the type of Ki Pro Mini recording and associated conversion formats used on the input or output for a particular workflow.

1.1 RECORD TYPE

This parameter defines the frame recording method of media stored. RECORD TYPE can be configured to record the incoming video signal in a "NORMAL" manner, "PsF" signal if the incoming source is 1080psf 29.97 (for example), or variable frame rate (VFR).

1.1 RECORD TYPE

NORMAL (default)
PsF
VFR

Record standard format as input
Record progressive segmented frame
Record variable frame rate

Note: A 23.98Hz source is automatically treated as PsF, regardless of this setting. For 29.97 Hz or 25 Hz, "NORMAL" means encode as interlaced and "PSF" means encode as progressive. This only applies to 1080 formats.

VFR (Variable Frame Rate) recording makes use of meta data embedded in the RP188 data stream on the SD-SDI/HD-SDI input, allowing for the frame rate to change actively. Examples of cameras offering variable frame rate include Panasonic AJ-HDC27 and several cameras from the Panasonic HPX line.

Note: In the current firmware, Ki Pro Mini supports 720p VFR rates of 23.98, 25 and 29.97fps. Other 720p rates and 1080p VFR support will be added with a future firmware update.

1.3 1080p PLAYBACK

This parameter defines the format applied when 1080p media is played back from storage.

1.3 1080p Playback	Progressive PsF (default)	Playback as standard 1080p progressive frame Playback as 1080 progressive segmented frame (regardless of what was recorded when input)
-----------------------	------------------------------	--

2.1 VIDEO INPUT

This parameter selects a video input source from the video input connections available. This is the video that will be recorded and/or passed through.

2.1 VIDEO INPUT	SDI (default) HDMI	Selects SDI input connector Selects the HDMI input connector
--------------------	-----------------------	---

2.2 AUDIO INPUT

This parameter selects an audio input source from the audio input connections available, including embedded SDI audio which requires an SDI video source and HDMI audio, which requires an HDMI video source.

2.2 AUDIO INPUT	SDI (default) XLR HDMI	Selects SDI embedded audio from the SDI input connector (if SDI video input is selected) Selects the XLR input for audio input Selects HDMI embedded audio (if HDMI video input is selected)
--------------------	----------------------------------	--

Note: XLR input could be microphone level or line level, depending on the connector panel switch setting.

2.3 AUDIO CHANNELS

This parameter selects the use of either two or eight audio channels via SDI embedded audio. Generally, when working with camera sources, there are only one or two audio tracks being produced, and therefore 2 channel would be the appropriate selection. In post production use, there are often more channels of audio required, so 8 channel audio may be the appropriate choice in such situations. Ki Pro Mini only allows for the selection of either 2 channels or 8 channels of audio to be written to the QuickTime file that is recorded. Therefore, if the source has more than 2 channels of audio, but less than 8 channels of audio that need to be preserved, the CONFIG Menu parameter 2.3 Audio Channels would need to be set to "8 Channels."

Notes:

1. Not all devices support 8 channel audio. Ki Pro Mini does not provide a "mixdown" option for 8 channel recordings on output, so be sure to use devices that support 8 channel audio via SDI if the 8 channels recorded are desired.
2. If 8 Channels are selected for 2.3 Audio Channels, but 2.2 Audio Input is set to any selection other than SDI (XLR or HDMI) then a Warning prompt will appear on the display "Warning 2 Channel Format." Clear this warning by selecting SDI audio as the input source in 2.2 Audio Input or by selecting 2-channel audio in 2.3 Audio Channels.

2.3 AUDIO CHANNELS	2 Channels (default) 8 Channels	Selects recording of 2 SDI embedded audio channels Selects recording of 8 SDI embedded audio channels
-----------------------	------------------------------------	--

4.1 ANALOG AUDIO

This parameter configures the analog audio signal levels for input and output. Professional audio equipment has much higher levels than consumer equipment: a 0 VU reading corresponds to +4 dBu. Connecting a professional +4 dBu device to a consumer audio input -10dBV (-7.8 dBu) may cause overloading, whereas the output of a consumer device probably does not have sufficient power to drive a professional audio input. With consumer and semi-professional audio equipment, a VU reading of 0 dB is typically referenced to -10 dBV. 0 dBu = 0.775 VRMS. These settings are valid with the panel Mic/Line switch set to "Line." (The Mic settings are lower input level settings for use with condenser and dynamic microphones—use Mic +48 for powered condenser mics and Mic for dynamic microphones.)

4.1 ANALOG AUDIO	+24dBu (default) +18dBu +15dBu +12dBu	Selects pro-level USA signal levels of +24dBu Selects pro-level Europe signal levels of +18dBu Selects pro-level German signal levels of +15dBu Selects consumer signal levels of +12dBu Note: Maximum amplitude (0 dBFS)
---------------------	--	---

6.1 GENLOCK

This parameter selects source of reference video used to genlock to during playback. Ki Pro Mini always genlocks to the selected input during capture.

6.1 GENLOCK	INPUT FREERUN (default)	Use the currently selected input as the Genlock source Free run mode: Ki Pro Mini syncs to its own timebase and is not locked to an external source
----------------	----------------------------	--

8.0 TC IN

This parameter selects the source of timecode from those available.

8.0 TC IN	TC VALUE (default) SDI RP188 LTC TIME OF DAY	Use the value specified in parameter 8.1 TC VALUE Use the timecode read from the embedded RP188 metadata in the SDI input Use timecode from the LTC input connector Set to "Time of Day" clock (CONFIG parameter 55.6)
--------------	---	---

8.1 TC VALUE

This parameter selects an hour for timecode to start.

8.1 TC VALUE	1 to 23 default: 01:00:00:00	Use the ADJUST buttons to select a timecode hour. For example: 01:00:00:00, "02:00:00:00, etc.
-----------------	---------------------------------	--

8.2 TC TYPE

This parameter selects drop frame or non-drop frame timecode.

8.2 TC TYPE	NDF (default) DF	Selects Non-drop Frame timecode Selects Drop Frame timecode
----------------	---------------------	--

8.3 ARM RECORDING

This parameter selects how recording will begin: either by pressing the physical record button (or web “Record” button), via incrementing start/stop timecode values, or via a LANC signal.

If arm recording on timecode, parameters 8.0, 8.1. and 8.2 must be set to a qualified source and type of timecode. Timecode that starts and stops, such as is produced by record run timecode, should be used; freerun timecode is not viable for this feature since it does not produce start and stop values.

If arm recording using LANC, you must have a LANC enabled device connected. A LANC controller can be connected to the Ki Pro Mini and then looped out to the camera; hitting record on the LANC controller will cause both the camera and the Ki Pro Mini to begin recording. Important: you cannot simply have a LANC controller only connected to Ki Pro Mini and use it to arm or recording; you need a LANC enabled Sony or Canon camera in the signal chain. The camera is the essential element because it contains the LANC (or Control-L) protocol; if only a camera is used, it can be connected to Ki Pro Mini directly and if the camera begins recording, the Ki Pro Mini will also begin recording.

8.3 ARM RECORDING	REC KEY (default) TC/REC KEY LANC/REC KEY	Start Record button is pressed Start on Time Code or Record button Start Ki Pro Mini under LANC control. When selected and you have a LANC controller connected to the Ki Pro Mini and looped out to the camera, the Ki Pro Mini will go into record when you hit record on the LANC controller.
----------------------	---	--

13.1 CAMERA DATA

Some cameras produce SDI ancillary data that users may want to transfer to their Ki Pro Mini recordings. Examples include: start/stop commands, timecode, reel name, clip name and take. The CONFIG menu parameter 13.1 Camera Data is designed to address this use of SDI ancillary data. The default for this parameter is “None”; when this is selected, no camera metadata is passed to any of the Ki Pro Mini parameters even if a camera with SDI ancillary data is connected to the Ki Pro Mini. If an appropriate camera is present and sending appropriate SDI ancillary data and that camera manufacturer/ model is selected from the list, then AJA passes as much of the metadata that is available from the camera (and is viable for AJA to support) into the Ki Pro Mini’s timecode value, file name, and other applicable parameters.

13.1 CAMERA DATA	NONE (default)	Camera metadata is not passed to any of the Ki Pro Mini parameters even if a camera with ancillary data is connected to the Ki Pro Mini.
	RED Epic	Red Epic Camera metadata available from the camera is passed into the Ki Pro Mini’s timecode value, file name, and other applicable parameters.
	RED One 24	Red One 24 Camera metadata available from the camera is passed into the Ki Pro Mini’s timecode value, file name, and other applicable parameters.
	RED One 25	Red One 25 Camera metadata available from the camera is passed into the Ki Pro Mini’s timecode value, file name, and other applicable parameters.
	Canon XF	Canon XF-series with SDI output will have metadata available from the camera passed into the Ki Pro Mini’s timecode value.

This menu parameter has domain over an array of other Ki Pro Mini parameters; selecting Camera Data supersedes other parameter selections if valid ancillary data is present and the camera is selected from the menu parameter.

13.1 CAMERA DATA (continued)

Example: The RED Epic sends ancillary data from which the reel name, clip name, take and timecode value are obtained from the ancillary data and passed to the Ki Pro Mini recording.

Reel: A230
Clip Name: A230_C001_0714SW
Take: _001
Timecode Value: 20:11:05:12

Within the Ki Pro Mini, instead of using the 17.0 Reel Name that is set to "001" within the menu parameter, the Reel Name that is written to the file is "A230."

Instead of the standard clip naming convention produced by the MEDIA menu parameters 17.2, 17.3, 17.4, 17.5 and 17.6 where the resulting file would be named "SC1ATK1"—instead a file is produced with the name "A230_C001_0714SW_001".

Instead of the CONFIG menu parameters of 8.0, 8.1, and 8.2, for timecode values that might produce a value of 01:00:00:00 in the recorded file—instead the value of 20:11:05:12 is produced.

Additionally, if a start/stop flag is present in the ancillary data, then instead of the value selected in CONFIG menu parameter 8.3 Arm Recording, the starting and stopping is produced by the start/stop flag of the camera (the Rec Key is always a viable selection even when the Camera Data parameter is selected).

To avoid confusion, the various CONFIG or MEDIA menu parameters do not change; the changes only affect the file written to the media. Furthermore, if a piece of metadata is missing, such as Reel Name, the Ki Pro Mini will write all other parameters and use the standard setting for a value for which no ancillary metadata was found. This means in some cases that a file could have a clip name associated to the camera recording, but the reel number associated with the clip created by the camera and the Ki Pro Mini could differ.

To make the integration with cameras as straightforward as possible, only one selection, 13.1 Camera Data, in the CONFIG menu parameters needs to be set as opposed to settings throughout various menu parameters in CONFIG and MEDIA menu parameters.

Important Notes About The Various Cameras Supported by 13.1

RED Epic: With the RED Epic, AJA recommends sending the camera an appropriate genlock/reference signal so that the Ki Pro Mini recordings will be timecode accurate when compared to the RED Epic recordings. RED Epic firmware version 1.6.24 (or later) is required for proper operation.

RED One 24: This setting is actually designed to extract the 23.98 frame per second from within the RED One 720p 59.94 output. Note that "24" is used as opposed to 23.98 in order to accommodate the user interface constraints. For the RED One, timecode should be sent to the camera via a timecode generator in order to produce corresponding timecode recordings on the Ki Pro Mini; note that even with this configuration, the timecode value produced has an accuracy of +/- 1 frame. RED One firmware version 31.6.16 (or later) is required for proper operation.

RED One 25: For the RED One, timecode should be sent to the camera via a timecode generator in order to produce corresponding timecode recordings on the Ki Pro Mini; note that even with this configuration, the timecode value produced has an accuracy of +/- 1 frame. RED One firmware version 31.6.16 (or later) is required for proper operation.

Canon XF: Because the Camera Data parameter requires the use of SDI, only the XF series cameras that feature SDI outputs can be used with this feature. These cameras provide ancillary data that produces start/stop commands and timecode values but not clip naming.

41.1 VIDEO SG FRMT

This parameter determines the video format output from Ki Pro Mini's internal test signal generator. This parameter is used with parameter 41.2 to determine the type of video test signal output by Ki Pro Mini.

41.1 VIDEO SG FRMT	525i 29.97 (default) 625i 25 720p 50 720p 59.94 1080PsF 23.98 1080i 25 1080i 29.97	Select the video format desired for test signal output.
-----------------------	--	---

41.2 VIDEO SG

This parameter determines the video signal output from Ki Pro Mini's internal test signal generator. This parameter is used with parameter 41.1 to determine the type of video test signal output by Ki Pro Mini.

41.2 VIDEO SG	OFF (default) Black 75% Bars 100% Bars	Turn test signal output OFF. Video test signal output is color black. Video test signal output is 75% color bars. This 75% amplitude, 100% saturation test signal is useful to check low frequency response and video tilt as well as the performance of video clamping. Video test signal output is 100% color bars. This 100% white full field bars test signal is helpful to check chroma amplitude versus overall video level.
------------------	---	---

41.3 AUDIO SG

This parameter determines the audio signal output from Ki Pro Mini's internal test signal generator.

41.3 AUDIO SG	OFF (default) Silence 1 kHz	Turn audio test signal output OFF. Output an audio test signal containing silence only. Output a standard 1 kHz test signal tone.
------------------	-----------------------------------	---

50.1 IP CONFIG

This parameter determines the type of TCP/IP network configuration used by Ki Pro Mini.

Note: With parameters 50.1, 50.2 and 50.3, there is no timeout when editing—changes made while in these menus will be saved and activated when the menu is exited.

50.1 IP CONFIG	STATIC ADDR DEFAULT ADDR DHCP (default)	Assign a static IP address manually (parameters 50.2, 50.3, and 50.4 will have to be entered to accomplish this). Use the factory default static IP address: 10.65.74.65 Select automatic IP address assignment from DHCP server on LAN. Note: if Ki Pro Mini cannot find a DHCP server to communicate with, it will select the default factory IP address of 192.168.0.2.
-------------------	---	--

50.2 IP ADDRESS

This parameter determines the static IP address used by Ki Pro Mini for TCP/IP networking.

50.2 IP ADDRESS	<i>variable</i>	<p>Using the adjust buttons, enter an IP address compatible with your LAN (if you have one). If direct connecting to a computer, enter a legal IP address that you'll also enter in the computer's web browser. This is only needed for Static IP configurations.</p> <p>If 50.1 is set to <i>DHCP</i> and there is a DHCP failure, then the default IP address is: 192.168.0.2 If 50.1 is set to <i>Default Addr</i>, the default static IP address is: 10.65.74.65</p>
--------------------	-----------------	---

Note: For parameters 50.2, 50.3, and 50.4, you will be setting IP addresses that consist of "octets" separated by a period (i.e., 10.0.181.0). When editing these, the *Select* button selects the octet and then the *Adjust* buttons select the desired number. Pressing *Select Up* again advances to the next octet. At the final octet, the address will flash—pressing *Select Up* at that point confirms the setting.

When these parameters are edited, you can abort the editing process by backing out (press the *Select* down arrow button repeatedly until the edit passes the first octet). You'll notice that after completing the edit on the last octet, the display will blink—this is an indication that the edited IP address is about to be saved. You can save the edited IP address (press the *Select* arrow up to save) or choose not to save by pressing the *Select* arrow down button.

50.3 SUBNET MASK

This parameter determines the subnet mask used by Ki Pro Mini for TCP/IP networking.

50.3 SUBNET MASK	<i>variable</i>	<p>Using the adjust buttons, enter a subnet mask compatible with your LAN (if you have one). This is only needed for Static IP configurations.</p> <p>If 50.1 is set to <i>DHCP</i>, the default <i>Subnet Mask</i> will be assigned by the DHCP server</p> <p>If 50.1 is set to <i>Default Addr</i>, the default <i>Subnet Mask</i> is: 255.0.0.0</p>
---------------------	-----------------	--

Please read the "Note" about editing IP addresses in parameter 50.2 as it also applies to parameters 50.3 and 50.4.

50.4 STATIC GATEWAY

This parameter determines the gateway or router used by Ki Pro Mini on your LAN for TCP/IP networking.

50.4 STATIC GATEWAY	<i>variable</i>	<p>Using the adjust buttons, enter a gateway compatible with your LAN (if you have one). This is only needed for Static IP configurations.</p> <p>If 50.1 is set to <i>DHCP</i>, the default <i>gateway</i> will be assigned by the DHCP server</p> <p>If 50.1 is set to <i>Default Addr</i>, the default gateway is: 10.0.0.1</p>
------------------------	-----------------	--

Note: Without a properly configured default gateway (whether you have a router/gateway or not), Ki Pro Mini will be unable to see other Ki Pros or FS1s on the network, although you may still be able to control the Ki Pro Mini via a web browser. Also, without a proper gateway defined, the discovery feature “Available Ki Pros—Click to Refresh” on the *Network* web page will not work correctly and list other Ki Pros or FS1s on the network.

50.5 SYSTEM NAME

This parameter defines a name for Ki Pro Mini and gives it a unique identifier. This same name is used both when displaying systems via the web interface.

50.5 SYSTEM NAME	<i>variable</i>	<p>Using the adjust buttons, enter a name for Ki Pro Mini. Using the adjust buttons and the top Select button, select the characters for each of the up to 20-character name. The adjust buttons scroll through the choices and the top Select button advances to the next character. While selecting characters, the character being changed will flash to show its position. The character set allowed is: 0 through 9, '-', '.', A through Z (uppercase) and a through z (lowercase).</p> <p><i>Default:</i> Ki Pro Mini</p>
---------------------	-----------------	---

50.6 MAC ADDRESS

This parameter is an information only field showing the MAC address of the Ki Pro Mini's ethernet adapter.

50.6 MAC ADDRESS	<i>information only display</i>	<p>Selecting this parameter allows you to view Ki Pro Mini's ethernet MAC address. The MAC address is a unique value associated with the internal ethernet network adapter. MAC addresses are also known as hardware addresses or physical addresses. MAC addresses uniquely identify an ethernet adapter on a LAN.</p> <p>MAC address format: MM:MM:MM:SS:SS:SS</p> <p>The value is 12-digit hexadecimal, where the first half identifies the manufacturer and the second half identifies the unique serial number.</p>
---------------------	---------------------------------	--

55.4 DATE SET

This parameter manually sets the calendar date of the internal Ki Pro Mini clock. The value is defined as YYYY/MM/DD (year/month/day).

55.4 DATE SET	<i>variable</i>	Using the adjust buttons, enter a calendar date for Ki Pro Mini. Using the adjust buttons and the top SELECT button, select the characters for each category (YYYY/MM/DD). The adjust buttons scroll through the choices and the top SELECT button advances to the next character. While selecting characters, the character being changed will flash to show its position. When finished, the final press of the SELECT up button will flash the whole value, hit SELECT once more to confirm and the next menu parameter will appear.
------------------	-----------------	---

55.6 TIME SET

This parameter manually sets the calendar date of the internal Ki Pro Mini clock, when setting manually (NTP not used).

55.6 TIME SET	<i>variable</i>	<p>Using the adjust buttons, enter a time for Ki Pro Mini's clock. Using the adjust buttons and the top Select button, select the characters for each digit (hours/minutes). The adjust buttons scroll through the choices and the top Select button advances to the next character. While selecting characters, the character being changed will flash to show its position. When finished, the final press of the SELECT up button will flash the whole value, hit SELECT once more to confirm and the next menu parameter will appear. Time is set using a 24 hour format (military) and must be set to GMT time.</p> <p>Note: there are many websites that will assist you in converting your local regional time to GMT (UTC). AJA does not endorse any particular one, but here are two examples:</p> <p>http://tycho.usno.navy.mil/zones.html http://hurricanes.noaa.gov/zulu-utc.html</p>
------------------	-----------------	--

70.2 DISPLAY INTENSITY

This parameter determines the brightness of the alphanumeric LCD display and front panel backlit buttons.

70.2 DISPLAY INTENSITY	<i>variable</i>	<p>Using the adjust buttons, you can dim or brighten the alphanumeric display and activity indicator LEDs in steps from 1 (dim) to 8 (brightest)</p> <p><i>Default: 6</i></p>
---------------------------	-----------------	---

70.3 FAN SPEED

This parameter determines the speed of Ki Pro Mini’s internal cooling fan. In some environments where audio recording is occurring close to the Ki Pro Mini unit, it may be desirable to set the fan speed to “QUIET RECORD” for optimum quiet operation.

70.3 FAN SPEED	NORMAL NORMAL AUTO QUIET RECORD (default) QUIET AUTO	Fan runs at normal fixed speed for optimum cooling. Fan runs at variable speeds for optimal cooling. Fan runs at a fixed slower speed for optimum quiet. Fan runs at normal speed until recording begins, then the fan ramps down to a slower speed for optimum quiet.
-------------------	---	---

80.1 SERIAL NUMBER

This parameter displays this Ki Pro Mini’s unique serial number.

80.2 SW VERSION

This parameter displays Ki Pro Mini’s software version level.

99.0 FACTORY RESET

Selecting this parameter and then pressing the ADJUST (up) button for 2 seconds recalls Ki Pro Mini’s factory default settings.

Caution!

Selecting this parameter and recalling factory defaults will overwrite the current settings (with the exception of network settings, which are retained).

Recalling factory defaults does not affect these network settings: IP Config, IP Address, Subnet Mask, Default Gateway, System Name, or Date and Time. To clear network settings and recall factory defaults, hold down both the Adjust (up) and Adjust (down) buttons at the same time.

Note: To set a single parameter to its factory default value, go to that parameter and hold down both the Adjust (up) and Adjust (down) buttons at the same time.

Chapter 4: Browser Remote Control

Remote Control Overview

An optimized web server inside Ki Pro Mini allows you to remotely monitor and adjust parameter settings via a browser client running on a network wired computer. The network can be a closed local area network, a straight computer-to-Ki Pro Mini cable, or even exposed through a firewall to a broadband WAN (not generally recommended since anyone on the internet can then access the Ki Pro Mini).

The LAN connection on Ki Pro Mini uses a standard RJ45 connector, but internally it's intelligent and communicates via standard "straight-through" CAT 5 ethernet cables or null-modem (cross-over) cables without any configuration or strapping required.

Note: Safari is the supported web browser for Ki Pro Mini control. Other browser software may work, but AJA cannot guarantee operation.

Web Browser via Ethernet

To control Ki Pro Mini remotely, connect a computer to the Ki Pro Mini unit's LAN connector, an RJ45 socket, via a CAT5 ethernet cable.

To access the Ki Pro Mini, simply enter its URL in the web browser. The URL will be the IP address defined in Ki Pro Mini's Network parameter menus (50.2—please note also that 50.1 through 50.4 must all be configured correctly to access Ki Pro Mini on your network). If Ki Pro Mini is using DHCP (the default), the IP address can be found by going to parameter 50.2 and reading it there. When Ki Pro Mini is shipped from the AJA factory, it defaults to DHCP operation.

If 50.1 is set to *DHCP*, and the DHCP server on the network fails to grant an IP address, then Ki Pro Mini will fall back to the static IP address.

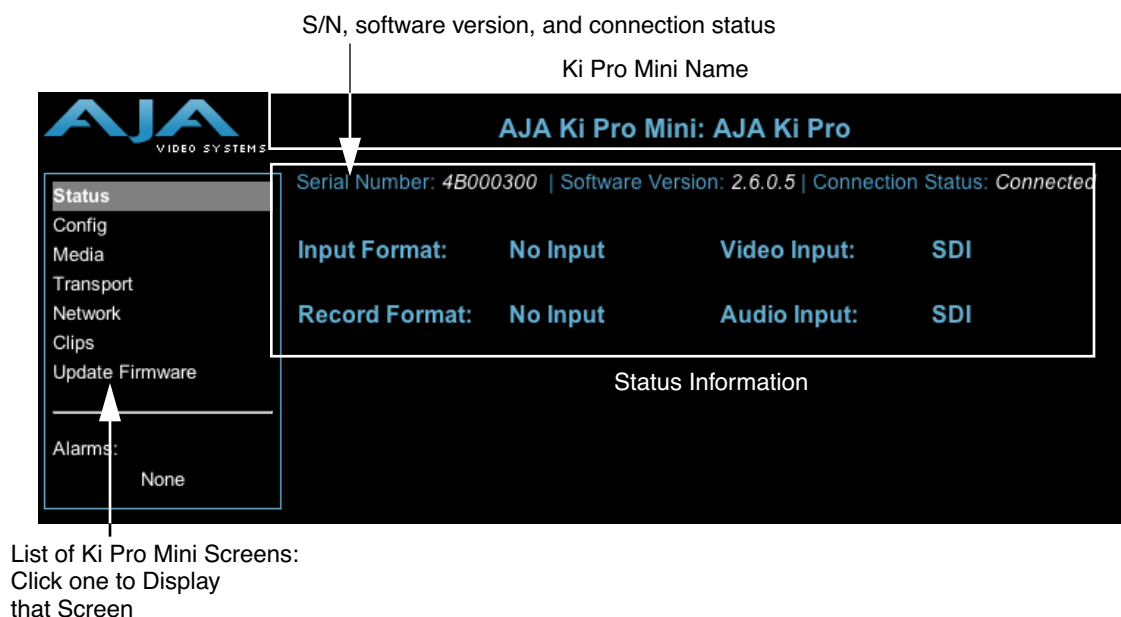

If 50.1 is set to *Default Addr*, the factory default static IP address is: 10.65.74.65.

So, if 50.1 is set to *Default Addr*, you would type the following in the web browser: *http://10.65.74.65* to see Ki Pro Mini's web interface *Main Status* screen.

General Screen Information

All Ki Pro Mini web screens have certain areas in common. On the left of each screen is an information pane listing all the available Ki Pro Mini screen choices. Click any of these items to jump to that screen. At the top of each screen you'll also find a heading showing the connection status in addition to the Ki Pro Mini's serial number and software version. This latter information is useful if you ever have to call AJA Technical Support to discuss a problem or get help. In the middle of each screen are menu choices and information pertaining to the subject matter of that screen.

Ki Pro Mini web screens closely mirror the parameter menus displayed on its front panel. In each of the screens presented on the following pages, we'll list the parameter menu numbers that are related so you can read the full definitions.

Ki Pro Mini Web Interface, Main Status Screen

Controlling Multiple Ki Pros

From the *Network* screen, you can at-a-glance see all of the Ki Pro devices present on the same local LAN as the current Ki Pro you are controlling. At the bottom of the screen under "Available Ki Pros: Click to Refresh," the system names of all Ki Pros and Ki Pro Minis on the LAN are listed. Clicking on any of these will bring up the Status screen of that particular Ki Pro.

Note: The Ki Pro you control may be running a different software version so screens may look different. As a rule, it's wise to have all your Ki Pro devices running the most current software and the same version. Also, you must have a properly configured default gateway to see the Ki Pros. In addition to Ki Pro on the LAN, the network screen will also display any AJA FS1 frame syncs that are also attached to the LAN—these will be displayed under "Others" at the bottom.

Also, if the Default Gateway (parameter 50.4) is not configured properly, other Ki Pros will not be visible here. If it displays "No Ki Pros found" then check the gateway setting.

Gang Recording

Multiple Ki Pro units (both Ki Pros and Minis) can be used in unison to produce recordings via the Gang Control feature. This feature is only available via the web UI when Ki Pro units have IP addresses configured under a common network and subnet mask and are connected via their LAN connections to an ethernet switch or hub to a host computer.

Important Note: Gang control via the web UI is only supported under wired ethernet connections, not under 802.11 wireless connections (Ki Pros only since Ki Pro Minis don't support wireless 802.11 anyway). AJA recommends disabling the 802.11 wireless connections when working with Ki Pro units under gang control. Leaving 802.11 wireless connections enabled while operating Ki Pro units under gang control can lead to sluggish or erratic web UI interactions.

Example:

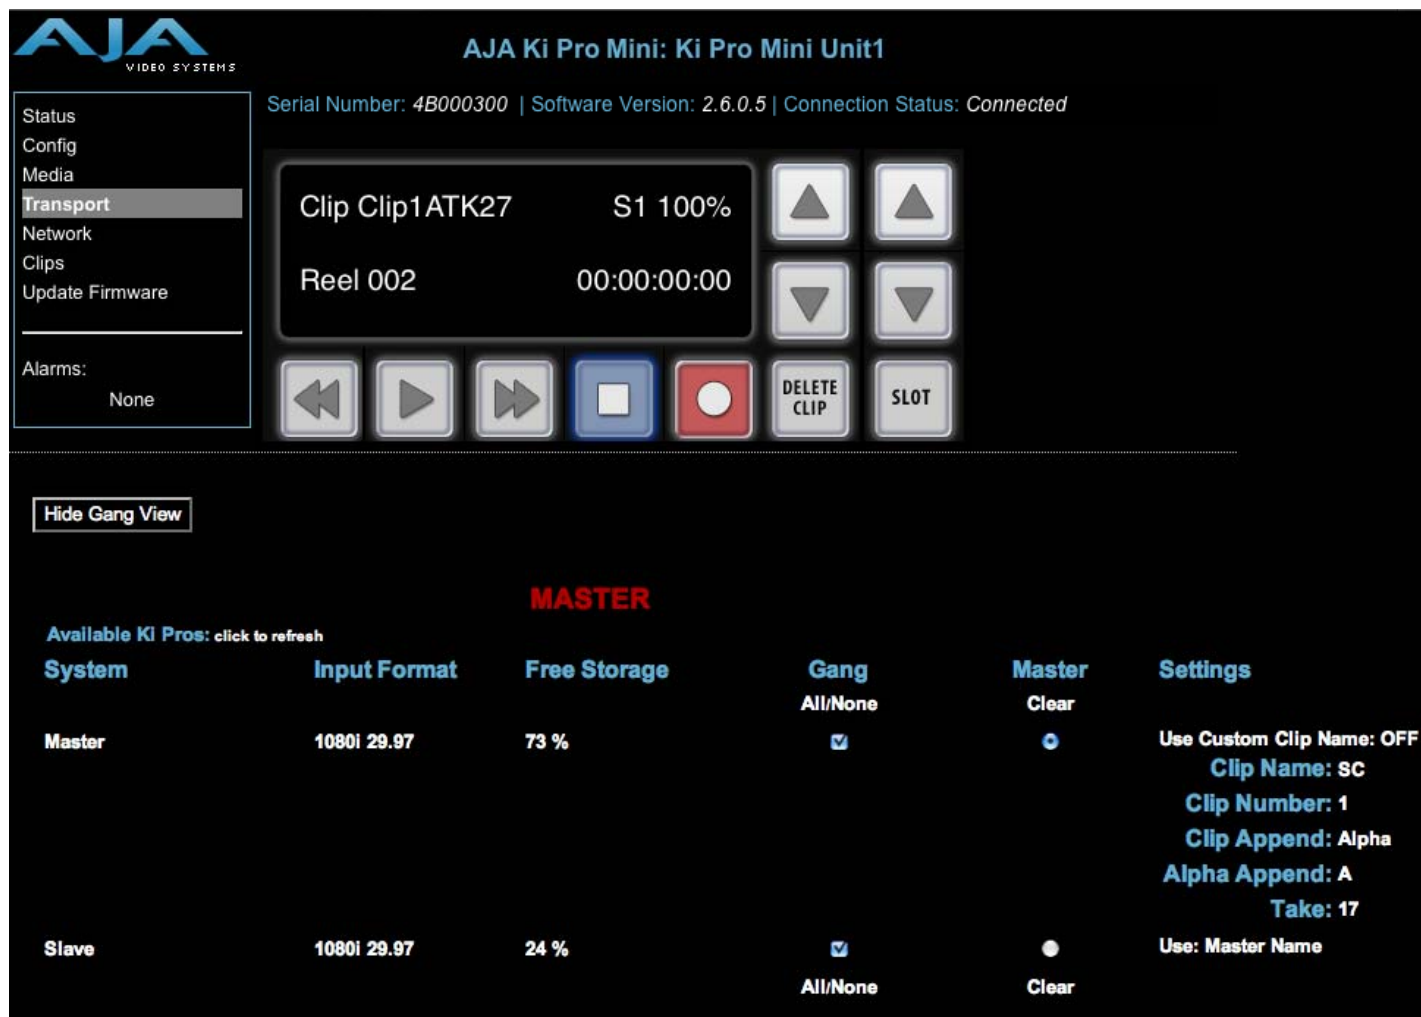

You have a Ki Pro "Master" and a Ki Pro "Slave" both attached on a network where their static IP addresses are 192.168.0.2 and 192.168.0.3 respectively—each with a subnet mask value of 255.255.255.0. They are connected to a host computer with IP address 192.168.0.1 and subnet mask 255.255.255.0. The host computer uses a web browser, like Apple's Safari, to access the "Master" Ki Pro by entering 192.168.0.2 in the URL field of the browser. The Ki Pro "Master" unit web UI should appear.

How to Use Gang Recording

Navigating to the Transport screen, a "Show Gang Controls" button appears on the left hand side of the screen. If "Show Gang Controls" is clicked, a list of "Available Ki Pros" is presented. If Ki Pro units that were expected to appear do not appear, click on "Hide Gang View" then click on "Show Gang View" again to refresh. Ki Pro information can take up to a few seconds to be displayed. Finally, if Ki Pros are not listed after refreshing, confirm that the Ki Pros are on the appropriate network, have the appropriate IP address, etc.

Parameters for each available Ki Pro will appear in the Gang Controls area. These include: *System*, *Input Format*, *Free Storage*, *Gang*, *Master* and *Settings*. Ki Pro units that may be added to a gang will appear under the System column. The *Input Format* column gives information on what type of video format/framerate each system is receiving. *Free Storage* allows for an "at a glance" view of the capacity of the media in each unit. *Gang* is where the units can be added or removed from the gang. *Master* allows the promotion of a Ki Pro unit to the "controlling" role in the gang. *Settings* allows for the configuration of clip names on the Master and Slave Ki Pro units.

A screenshot of a web interface showing a button labeled "Show Gang Controls". The button is rectangular with a thin border and is set against a dark background.

AJA Ki Pro Mini: Ki Pro Mini Unit1
Serial Number: 4B000300 | Software Version: 2.6.0.5 | Connection Status: Connected

Clip Clip1ATK27 S1 100%
Reel 002 00:00:00:00

Alarms: None

Hide Gang View

MASTER

Available Ki Pros: click to refresh

System	Input Format	Free Storage	Gang	Master	Settings
Master	1080i 29.97	73 %	<input checked="" type="checkbox"/>	<input checked="" type="radio"/>	Use Custom Clip Name: OFF Clip Name: SC Clip Number: 1 Clip Append: Alpha Alpha Append: A Take: 17
Slave	1080i 29.97	24 %	<input checked="" type="checkbox"/>	<input type="radio"/>	Use: Master Name

Ki Pro Web Interface, Transport Screen—Show Gang Control

To add a Ki Pro to a gang, simply select the checkbox for the unit in the Gang column. As a shortcut, if all available Ki Pro units are desired for a gang, select the "All" item below Gang. Alternately, if you want to clear units from a gang, deselect them or use the "Clear" option. **IMPORTANT:** There can be only one Master in a gang; typically, the IP address for the Ki Pro unit you entered and are viewing the web UI on is the one which should be promoted to the "controlling" role. If the unit with the IP address that is currently being viewed via the web UI is selected, a red capitalized "MASTER" text will appear on the webpage above the columns.

A Master Ki Pro unit can send three items to the slave Ki Pros units within a gang; a record start command, a stop command and clip naming. The record start and stop commands are controlled from the web UI Transport area above the gang information on the Master Ki Pro unit or via physical front panel buttons (provided the unit is set to "Local Only" for the CONFIG parameter 35.2).

The Settings area is where the Ki Pro clip name for each unit is decided.

By default, the Ki Pro is configured to use the standard clip naming conventions, not the custom clip naming conventions. The first user selection is "Use Custom Clip Name"; if the user wants to use the standard clip naming convention, leave this set to "OFF", but if the user wants to create a custom clip name, mouse click on the "OFF" to reveal a pull-down for "OFF/ON" selection, then click "OK".

If "OFF" was selected, the next parameter would be "Clip Name", again, clicking on the "SC" or "Clip" presented brings up the pulldown and the "OK" box. "Clip Number" must be entered manually with a valid value for Ki Pro of 1 through 999 and then the enter/return key must be hit. NOTE: If the enter/return key is not entered after the selection, the value will revert to whatever was previously shown. Clicking on the value next to "Clip Append" and "Alpha Append" both bring up a pulldown and an "OK" button. "Take" operates like the "Clip Number", where a valid value of 1 to 999 can be entered and then the enter/return key needs to be hit for confirmation of the value. For custom clip naming considerations, review the section in this manual on "Custom Clip Naming."

Note that for Slave Ki Pro units, the Settings column provides a selection of either Use: "Master Name" or "Slave Name." Clicking on the default value of "Master Name" pulls up a pulldown selection of "Master Name" or "Slave Name" with an "OK" confirmation button. If the desire is to have clips named the same across all Ki Pro units' recordings, then the Use: "Master Name" selection should be made. If the desire is to have clips named independently on Ki Pro units, then "Slave Name" should be selected. Selecting "Slave Name" means that the recording will take it's name from the individual Ki Pro's parameters and not accept the value pushed to the Slave by the Master Ki Pro.

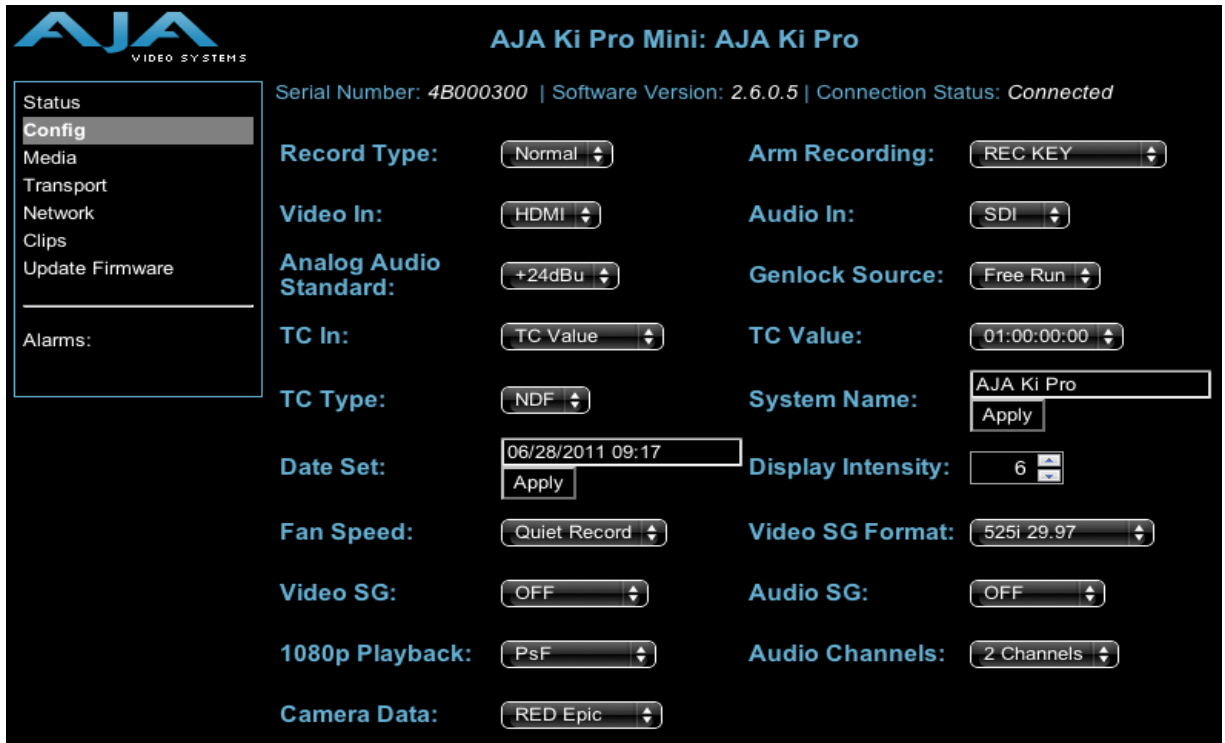

It is important to note that as of firmware 2.0, Ki Pro can initiate recordings among units quickly, but not all units will begin or end recordings precisely at the same time or the same frame. This is not really an issue if matching timecode via SDI embedded RP-188 or LTC is sent to each unit from a timecode generator via discrete outputs on the timecode generator or via a distribution amplifier for the timecode. Note that many non-linear edit systems, like Final Cut Pro, can sync clips based on timecode values for multi-clip editorial. Also note that Ki Pro does not, as of 2.0 firmware, provide simultaneous playback of media; only record start and stop functions are available.

Resetting Values To Factory Settings

To perform a global reset of Ki Pro Mini to factory settings, go to Ki Pro Mini front panel CONFIG parameter 99.0 for a reset to factory values.

Config Screen

The Config screen is a general purpose screen used to configure Ki Pro Mini's I/O choices, and also set up Ki Pro Mini's environment (name, clock settings, display etc.)

The screenshot shows the AJA Ki Pro Mini Config Screen. On the left is a sidebar menu with options: Status, Config (selected), Media, Transport, Network, Clips, Update Firmware, and Alarms. The main area is titled 'AJA Ki Pro Mini: AJA Ki Pro' and displays various settings. At the top, it shows 'Serial Number: 4B000300 | Software Version: 2.6.0.5 | Connection Status: Connected'. The settings are organized into two columns. The left column includes: Record Type (Normal), Video In (HDMI), Analog Audio Standard (+24dBu), TC In (TC Value), TC Type (NDF), Date Set (06/28/2011 09:17), Fan Speed (Quiet Record), Video SG (OFF), 1080p Playback (PsF), and Camera Data (RED Epic). The right column includes: Arm Recording (REC KEY), Audio In (SDI), Genlock Source (Free Run), TC Value (01:00:00:00), System Name (AJA Ki Pro), Display Intensity (6), Video SG Format (525i 29.97), Audio SG (OFF), and Audio Channels (2 Channels). Each setting is represented by a dropdown menu or a text input field with an 'Apply' button.

Ki Pro Mini Web Interface, Config Screen

Note: In the following web screen control definitions, the number in parentheses refers to the Parameter descriptions in Chapter 2—you can read more information there about the choices and their meanings.

Record Type (1.1): This parameter defines the frame recording method of media stored. RECORD TYPE can be configured to record the incoming video signal in a "NORMAL" manner, as a "PsF" signal if the incoming source is 1080psf 29.97 (for example), or VFR for variable framerate recording of the SD-SDI/HD-SDI input (such as Varicam).

Arm Recording (8.3): This parameter selects how recording will begin: either by pressing the physical record button (or web "Record" button), via incrementing start/stop timecode values, or via a LANC signal.

If arm recording on timecode, parameters 8.0, 8.1, and 8.2 must be set to a qualified source and type of timecode. Timecode that starts and stops, such as is produced by record run timecode, should be used; freerun timecode is not viable for this feature since it does not produce start and stop values.

If arm recording using LANC, you must have a LANC enabled device connected. A LANC controller can be connected to the Ki Pro Mini and then looped out to the camera; hitting record on the LANC controller will cause both the camera and the Ki Pro Mini to begin recording. Important: you cannot simply have a LANC controller only connected to Ki Pro Mini and use it to arm recording; you need a LANC enabled Sony or Canon camera in the signal chain. The camera is the essential element because it contains the LANC (or Control-L) protocol; if only a camera is used, it can be connected to Ki Pro Mini directly and if the camera begins recording, the Ki Pro Mini will also begin recording.

Video In (2.1): This parameter selects a video input source from the video input connections available. This is the video that will be recorded and/or passed through.

Audio In (2.2): This parameter selects an audio input source from the audio input connections available. This is the audio that will be recorded and/or passed through.

Analog Audio Standard (4.1): This parameter configures the analog audio signal levels for input and output. Professional audio equipment has much higher levels than consumer equipment: a 0 VU reading corresponds to +4 dBu. Connecting a professional +4 dBu device to a consumer audio input -10dBV (-7.8 dBu) may cause overloading, whereas the output of a consumer device probably does not have sufficient power to drive a professional audio input. With consumer and semi-professional audio equipment, a VU reading of 0 dB is typically referenced to -10 dBV. 0 dBu = 0.775 VRMS.

Genlock Source (6.1): This parameter selects source of reference video used to genlock to during playback.

TC In (8.0): This parameter selects the source of timecode from those available.

TC Value (8.1): This parameter selects an hour timecode start.

TC Type (8.2): This parameter selects drop frame or non-drop frame timecode.

System Name (50.5): This parameter defines a name for Ki Pro Mini and gives it a unique identifier. This same name is used both when displaying systems via the web interface and for display on Ki Pro Mini's screen saver (if System name is chosen in Parameter 70.1 Screen Saver).

Date Set (55.4): This parameter manually sets the calendar date of the internal Ki Pro Mini clock.

Time Set (55.6): This parameter manually sets the time of the internal Ki Pro Mini clock.

Display Intensity (70.2): This parameter determines the brightness of the alphanumeric display and front backlit buttons.

Fan Speed (70.3): This parameter determines the speed of Ki Pro Mini's internal cooling fan. In some environments where audio recording is occurring close to the Ki Pro Mini unit, it may be desirable to set the fan speed to "QUIET AUTO" or "QUIET RECORD".

Video SG Format (41.1): This parameter determines the video format output from Ki Pro Mini's internal test signal generator.

Video SG (41.2): This parameter determines the video signal output from Ki Pro Mini's internal test signal generator. This parameter is used with parameter above (41.1) to determine the type of video test signal output by Ki Pro Mini.

Audio SG (41.3): This parameter determines the audio signal output from Ki Pro Mini's internal test signal generator (OFF, silence, or 1 kHz tone).

1080p Playback (1.3): This parameter defines the format applied when 1080p media is played back from storage.

Audio Channels (2.3): This parameter selects the use of either two or eight audio channels via SDI embedded audio. Generally, when working with camera sources, there are only one or two audio tracks being produced, and therefore 2 channel would be the appropriate selection. In post production use, there are often more channels of audio required, so 8 channel audio may be the appropriate choice in such situations. Ki Pro Mini only allows for the selection of either 2 channels or 8 channels of audio to be written to the QuickTime file that is recorded. Therefore, if the source has more than 2 channels of audio, but less than 8 channels of audio that need to be preserved, the CONFIG Menu parameter 2.3 Audio Channels would need to be set to "8 Channels."

Notes:

1. Not all devices support 8 channel audio. Ki Pro Mini does not provide a "mixdown" option for 8 channel recordings on output, so be sure to use devices that support 8 channel audio via SDI if the 8 channels recorded are desired.
2. If 8 Channels are selected for 2.3 Audio Channels, but 2.2 Audio Input is set to any selection other than SDI (XLR or HDMI) then a Warning prompt will appear on the display "Warning 2 Channel Format." Clear this warning by selecting SDI audio as the input source in 2.2 Audio Input or by selecting 2-channel audio in 2.3 Audio Channels.

Camera Data (13.1): This parameter controls the use of camera-generated ancillary data. Some cameras produce ancillary data that Ki Pro Mini users may want to transfer to their recordings. Examples include: start/stop commands, timecode, reel name, clip name and take. If a selection other than “NONE” is selected, and an appropriate camera is present—and sending appropriate ancillary data—then the metadata available from the camera will be passed into the Ki Pro Mini’s timecode value, file name, and other applicable parameters. *Please read the discussion on Config Parameter 13.1 “Camera Data” in Chapter 3 for additional information.*

Media Screen

This screen offers settings for a variety of media-related functions, including formatting storage media, type of Apple ProRes 422 encoding, and reel and clip definitions.

Ki Pro Mini Web Interface, Media Screen

Encode Type (14.1): This parameter defines the Apple ProRes encoding method.

Play Media (15.1): This parameter determines behaviour during playback: either one clip will play when “Play” is selected, or all clips will be played when a play is selected. See parameter 15.1, Play Media, in Chapter 3 for greater detail and caveates.

Loop Play (15.2): This parameter turns looped playback on and off.

Format Media (16.1): This parameter is used to format the currently selected storage device.

Reel Name (17.0): The reel name is a number between 1 and 999 that determines the name of the media as it will appear when the CF card is mounted on a Mac OSX desktop.

Clip Name (17.2): This parameter determines the clip name associated with all clips generated while using this setting. The clip name is either “Clip” or “SC”.

Clip Number (17.3): This parameter determines the clip number, from 1 to 999, that follows the CLIP NAME, and is associated with all clips generated while using this setting.

Clip Append (17.4): This parameter is used with parameter 17.5 ALPHA APPEND to append a text value after the CLIP NUMBER or have no text appended.

Take (17.8): This parameter determines the TAKE number, from 1 to 999, that follows the CLIP NAME and CLIP NUMBER, followed by any ALPHA APPEND (if selected), generated for all clips while using this setting.

Alpha Append (17.5): This parameter is used with parameter 17.4 CLIP APPEND to append a text value after the CLIP NUMBER.

Use Custom Clip Name (19.1): This parameter enables or disables whether a custom clip name can be used. Refer to “Custom Clip Naming” in Chapter 3 for greater detail.

Custom Clip Name (19.2): This parameter allows you to enter a custom clip name. Once entered, you'll have to click the *Apply* button for it to take effect and be used.

Use Gang Clip Name (22.1): This parameter is used when performing gang recording via multiple Ki Pros (refer to *Controlling Multiple Ki Pros* earlier in this Chapter). If the desire is to have clips named the same across all Ki Pro ganged units' recordings, then use the "Master Name" pull down selection. If the desire is to have clips named independently on Ki Pro units, then "Slave Name" should be selected from the pull down. Selecting "Slave Name" means that the recording will take it's name from the individual Ki Pro's parameters and not accept the value pushed to the Slave by the Master Ki Pro. Refer to “Custom Clip Naming” in Chapter 3 for greater detail.

Transport Screen

This screen offers record, playback, fast forward, rewind and stop controls, similar to those available on the operator-side of Ki Pro Mini. The screen also duplicates what is displayed on the Ki Pro Mini front visual display, so you can see exactly what the Ki Pro Mini operator/camera person is seeing.

Ki Pro Mini Web Interface, Transport Screen

STOP ■ : Press STOP to end playback or a media operation (PLAY, FF, REV, or RECORD). When stopped, Ki Pro Mini displays the current point in the stopped clip. STOP can also be considered a “pause” button. A double-press of the STOP button will return Ki Pro Mini to an E-to-E state.

PLAY ▶ : press PLAY to begin forward playback of the current clip at normal speed.

RECORD ● : press the red RECORD button to begin recording. Once in RECORD mode, all other transport buttons are locked-out except the STOP button.

FFWD ►► : press button to begin fast playback of the current clip at 2x speed. Successive pushes increase the speed to 4x, 8x, and 16x. (Pushing the button after 16x speed is reached has no further effect.) When fast-forwarding, audio is muted.

REV ◀◀ : pressing REV when not lit, begins playback of the current clip in reverse at 1x speed. Successive pushes increase the speed to 2x, 4x, 8x, and 16x. (Pushing the button after 16x speed is reached has no further effect.) When playing in reverse, audio is muted for all speeds above 1x.

SELECT (up/down): while in the TRANSPORT menu, the SELECT buttons select clips and operate like “previous” and “next” keys. When a clip is selected it is “cued” to the beginning of the clip. Note that ordering and playback of clips is based on timestamp order, not clip name.

ADJUST (up/down): while in the TRANSPORT menu, and in the “STOP” mode, the ADJUST buttons will “single step” the current clip at a rate of one frame per button push (up=forward, down=reverse).

DELETE CLIP: dedicated button that when pressed, deletes the currently selected clip. When pressed, the system displays a precautionary “ARE YOU SURE?” prompt.

SLOT: this button serves two purposes. First, it selects which CF card is accessed by the system. Second, the SLOT button is used to unmount currently selected CF media.

Caution!

Not using the SLOT button to unmount a CF card before removal can cause problems with the files stored on the CF card.

Pushing the SLOT button cycles between unmounting media and selecting media. This function is only active when in the “STOP” mode and requires a “PRESS STOP TO CONFIRM” if not stopped. After you select a slot, the system returns to the last selected clip and timecode for that slot. If the media has been changed since the slot was last selected (physically removed/media replaced), then the “first” clip on the media will be “cued” to its start point. If inserted media has any issues, additional prompts may be displayed as appropriate such as: “WARNING FRMT MEDIA” or “WARNING MEDIA LOW.”

Show Gang View: when clicked, the Transport screen will be expanded at the bottom to show additional controls for controlling multiple Ki Pros. See “Gang Recording” discussed earlier in this chapter.

Network Screen

This screen contains all of the information required to set up Ki Pro Mini TCP/IP networking. The screen also shows all Ki Pro Minis that are on the same LAN as the Ki Pro Mini the web browser is currently communicating with.

Note: Ki Pro Mini IP Address and netmask fields filter keystrokes and only allow legal characters. The Ki Pro Mini also checks the format of the entry to ensure it is valid; if found to be invalid, the background of the IP Address or netmask will turn red. If you click the *Update* button while an invalid entry exists in one of these fields, Ki Pro Mini will display an error dialog—you must correct the error before updating.

Ki Pro Mini Web Interface, Network Screen

IP Address Type (50.1): use to change the IP address for Ki Pro Mini. When an IP address is entered and the Update button is clicked, the IP address will change and the browser will display a “redirecting to...” page which should send the browser to the new IP address entered. (You can also click on a link on the redirect page.

IP Address (50.2): enter an IP address compatible with your LAN (if you have one). When networking Ki Pro Mini to a computer, this is the IP address that you’ll enter in the computer’s web browser to bring up the Ki Pro Mini’s web interface from its embedded web server. You must also click the “Update” button to update Ki Pro Mini with the IP address entered here.

Netmask (50.3): enter a subnet mask compatible with your LAN (if you have one). You must also click the “Update IP Address” button to update Ki Pro Mini with the changed information entered here.

Default Gateway (50.4): enter the IP address for your LAN’s gateway/router (if you have one). You must also click the “Update IP Address” button to update Ki Pro Mini with the changed information entered here.

Update Network Settings: pressing this button requests Ki Pro Mini to update its IP information with that entered on this screen.

Available Ki Pros—Click to Refresh: all of the Ki Pro Mini and Ki Pro devices present on the same local LAN as the current Ki Pro Mini are listed below this heading (see note below). The serial numbers of all Ki Pro Minis on the LAN, or their defined “System Names” (see parameter 50.5) are listed—and clicking on any of these will bring up the Status screen of that Ki Pro Mini. Note: the Ki Pro Mini you control may be running a different software version so screens may look different. As a rule, it’s wise to have all your Ki Pro Mini devices running the most current software and the same version. Also, without a properly configured default gateway (whether you have a router/gateway or not), the discovery feature “Available Ki Pro Minis—Click to Refresh” on the Network page may not work.

Note: Ki Pro Mini devices shown are cached and may not reflect the realtime state of all Ki Pro Minis on the LAN. As Ki Pro Minis are added or removed from the network they may take awhile to appear in the Available Ki Pro Minis listing. If, at anytime you want a current view of the network (clearing the cache and showing the realtime state), then press the Control key on your keyboard while clicking the *Available Ki Pro Minis—Click to Refresh* link.

Clips Screen

The Clips screen allows you to see at a glance all of the clips on the currently selected CF card as chosen by the SLOT button (see *Transport* screen).

This screen also allows you delete clips listed, either all-clips or individually. A refresh button ensures that the web pages cache is updated to show the latest state of what is on the Ki Pro Mini.

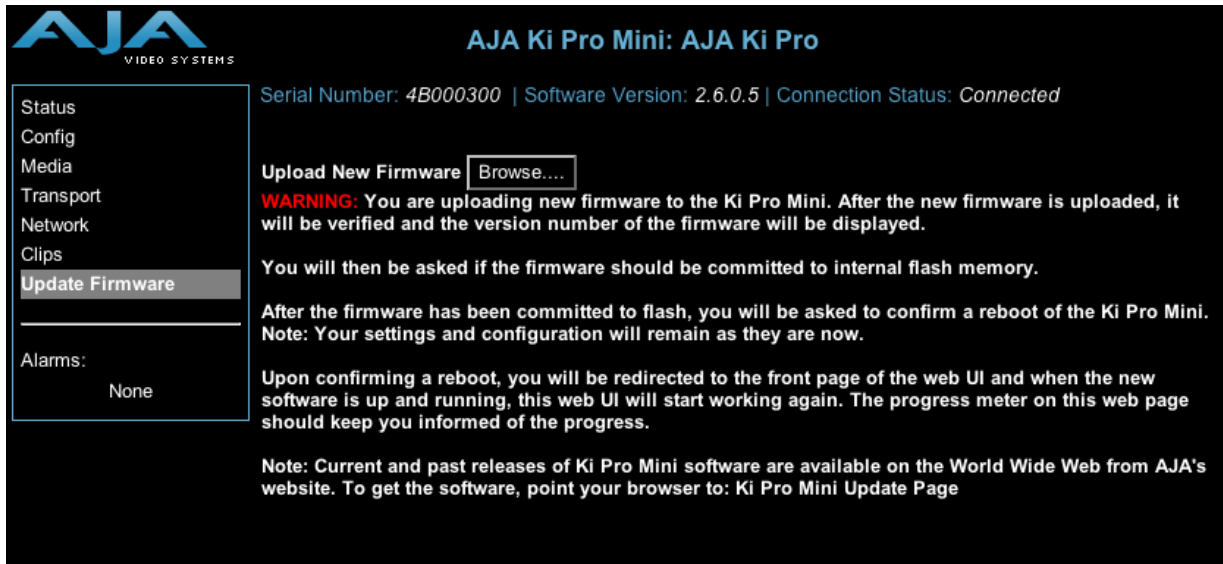

Clip Name	Duration	Time	Date
Clip1ATK1	1080i 29.97	00:00	05/04/11 08:13:19
Clip1ATK2	1080i 29.97	00:00	05/04/11 08:13:22
Clip1ATK3	1080i 29.97	00:00	05/04/11 08:13:24
Clip1ATK4	1080i 29.97	00:00	05/04/11 08:13:25
Clip1ATK5	1080i 29.97	00:00	05/04/11 08:13:28
Clip1ATK6	1080i 29.97	03:31	05/04/11 08:18:07

Ki Pro Mini Web Interface, Clips Screen

Update Firmware Screen

The Update Firmware screen allows you to update your Ki Pro Mini to later versions of software as they are issued by AJA and posted on the website. When software updates are released, they often contain new features, improvements, and bulletins that may be very useful. We suggest checking the website when you have time.

Ki Pro Mini Web Interface, Update Firmware Screen

Preparing to Update Software

Although Ki Pro Mini comes from the factory pre-installed with software, it may not be as up-to-date as software posted on our AJA website. This topic describes the steps required to upgrade the software in your Ki Pro Mini.

1. Download the Latest Ki Pro Mini Software

Current and past releases of Ki Pro Mini software are available on the World Wide Web from AJA's website. To get the software, point your browser to:

<http://www.aja.com/support/ki-pro/ki-pro.php>

This link is also available at the bottom of the "Update Firmware" screen (discussed later on this page). Once you're at the update page, Ki Pro Mini software files can be selected to download to your Mac or PC for upgrading your machine.

2. Unpack the Software

Ki Pro Mini software update files are "ZIP" files, which you can open with a number of standard and third party uncompressor applications. The software image that you'll install on Ki Pro Mini is a file with a name like *kipro_ver_2.5.0.5.bin* or similar.

Note: Depending on your PC or Mac operating system settings, the ".bin" extension may not be visible to you in a file directory.

Upload and Install the Software on your Ki Pro Mini

Uploading and installing the software update only requires a PC or Mac that can "see" the Ki Pro Mini via its ethernet connection. Follow this procedure to install the software:

1. Point your browser at Ki Pro Mini's upgrade page by clicking on the "Update Firmware" link at the bottom of the navigation box on the left-hand side of any Ki Pro Mini web page.

2. Click the “Browse...” button to select the file you previously downloaded. For example: *kipro_ver_2.5.0.5.bin* contained in the zipfile downloaded from AJA.
3. When you have selected a valid Ki Pro Mini image file, click the “Upload” button in the web browser. The file you select will upload to the Ki Pro Mini and be tested for validity. Incomplete, corrupted, or non-Ki Pro Mini software files are rejected.
4. Wait for the procedure to complete—it will take only a few minutes. When done, Ki Pro Mini will prompt you to restart your machine. After restart, Ki Pro Mini will be running the new software. Progress is shown on the front panel.
5. Once these steps are complete, Ki Pro Mini will be running the software you just uploaded until the next time you upgrade it. The configuration of the Ki Pro Mini prior to the upgrade will be preserved.

Ensure the new software is running by bringing up the Ki Pro Mini web page again; the software version is displayed at the top of all web screens. If for some rare reason it didn't update, you can then run through the update steps again.

Note:

On some browsers, the *Retry* page may appear even though the software upgrade was successful. If this occurs, before clicking on retry, refresh the web page and check the version number. If the new version number appears at the top of the page, the software upgrade was successful. If the old version appears, click *Retry*.

If there is a power outage or glitch during the software download, Ki Pro Mini will boot the older software version and the upgrade process can then be re-started by the user. This happens because Ki Pro Mini has been designed with a safety feature where an internal “safe” copy of the previous software is retained in the event the updating process fails.

Caution!

AJA recommends you only update the Ki Pro Mini when on mains power, or with a fully charged battery.

Appendix A: Specifications

Video Input

Digital: SD and HD-SDI (1xBNC), SMPTE-259/292/296
HDMI v1.3

Video Output (all simultaneously active)

Digital: SD and HD-SDI, SMPTE-259/292/296 (1xBNC)
HDMI

Timecode

LTC timecode input via BNC

SDI embedded RP188 timecode

Control

LANC Loop (2 LANC connectors)

Temperature

Operating Temperature Range: 5°C to 40°C

Safe Storage Temperature Range (power OFF): -20°C to 60°C

Power

Voltage: 100-240 VAC (to supplied AC Adapter);
12Vdc to power connector input on bottom of unit:

12 Vdc minimum

18 Vdc maximum

Current: 1.5A (maximum)

Power: 18W (at 12Vdc), 15W typical

Physical

Weight: 1.262 lbs (0.572 kg)

Dimensions: see drawing below.

Appendix B: Safety & Compliance

Federal Communications Commission (FCC) Compliance Notices

Class A Interference Statement

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15, Subpart B of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a commercial installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

FCC Caution

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Canadian ICES Statement

Canadian Department of Communications Radio Interference Regulations

This digital apparatus does not exceed the Class A limits for radio-noise emissions from a digital apparatus as set out in the Radio Interference Regulations of the Canadian Department of Communications. This Class A digital apparatus complies with Canadian ICES-003.

Règlement sur le brouillage radioélectrique du ministère des Communications

Cet appareil numérique respecte les limites de bruits radioélectriques visant les appareils numériques de classe A prescrites dans le Règlement sur le brouillage radioélectrique du ministère des Communications du Canada. Cet appareil numérique de la Classe A est conforme à la norme NMB-003 du Canada.

European Union and European Free Trade Association (EFTA) Regulatory Compliance

This equipment may be operated in the countries that comprise the member countries of the European Union and the European Free Trade Association. These countries, listed in the following paragraph, are referred to as The European Community throughout this document:

AUSTRIA, BELGIUM, BULGARIA, CYPRUS, CZECH REPUBLIC, DENMARK, ESTONIA, FINLAND, FRANCE, GERMANY, GREECE, HUNGARY, IRELAND, ITALY, LATVIA, LITHUANIA, LUXEMBOURG, MALTA, NETHERLANDS, POLAND, PORTUGAL, ROMANIA, SLOVAKIA, SLOVENIA, SPAIN, SWEDEN, UNITED KINGDOM, ICELAND, LICHTENSTEIN, NORWAY, SWITZERLAND

Declaration of Conformity

Marking by this symbol indicates compliance with the Essential Requirements of the EMC Directive of the European Union 2004/108/EC.

This equipment meets the following conformance standards:

Safety:

CB- IEC 60065:2001 + A1:2005

NRTL - UL 60065:2003 R11.06, CSA C22.2 NO. 60065:2003 + A1:06

GS - EN 60065:2002 + A1

Additional licenses issued for specific countries available on request.

Emissions:

EN 55103-1: 1996

EN61000-3-2:2006, EN61000-3-3:1995 + A1:2001 + A2:2005

Immunity:

EN 55103-2: 1996

EN61000-4-2:1995 + A1:1999 + A2:2001, EN61000-4-3:2006, EN61000-4-4:2004,

EN 61000-4-5: 2005, EN 610004-6:2007, EN61000-4-11:2004

The product is also licensed for additional country specific standards as required for the International Marketplace.

Warning!

This is a Class A product. In a domestic environment, this product may cause radio interference, in which case, the user may be required to take appropriate measures.

Achtung! Dieses ist ein Gerät der Funkstörgrenzwertklasse A. In Wohnbereichen können bei Betrieb dieses Gerätes Rundfunkstörungen auftreten, in welchen Fällen der Benutzer für entsprechende Gegenmaßnahmen verantwortlich ist.

Attention! Ceci est un produit de Classe A. Dans un environnement domestique, ce produit risque de créer des interférences radioélectriques, il appartiendra alors à l'utilisateur de prendre les mesures spécifiques appropriées.

Korea KCC Compliance Statement

1) Class A ITE

A급 기기 (업무용 방송통신기기)	이 기기는 업무용 (A 급) 으로 전자파적합등록을 한 기기이오니 판매자 또는 사용자는 이 점을 주의하시기 바라며, 가정외의 지역에서 사용하는 것을 목적으로 합니다.

This is a Class A product based on the standard of the VCCI Council (VCCI V-3/2008.04). If this equipment is used in a domestic environment, radio interference may occur, in which case, the user may be required to take corrective actions.

Translated caution statements, warning conventions and warning messages

The following caution statements, warning conventions, and warning messages apply to this product and manual.

Warning Symbol

Hazard Warning

Caution Symbol

Before operating your Ki Pro Mini unit, read the instructions in this document

**Warning!**

Read and follow all warning notices and instructions marked on the product or included in the documentation.

Avertissement ! Lisez et conformez-vous à tous les avis et instructions d'avertissement indiqués sur le produit ou dans la documentation.

Warnung! Lesen und befolgen Sie die Warnhinweise und Anweisungen, die auf dem Produkt angebracht oder in der Dokumentation enthalten sind.

¡Advertencia! Lea y siga todas las instrucciones y advertencias marcadas en el producto o incluidas en la documentación.

Aviso! Leia e siga todos os avisos e instruções assinalados no produto ou incluídos na documentação.

Avviso! Leggere e seguire tutti gli avvisi e le istruzioni presenti sul prodotto o inclusi nella documentazione.

**Warning!**

Do not use this device near water and clean only with a dry cloth.

Avertissement! N'utilisez pas cet appareil près de l'eau et nettoyez-le seulement avec un tissu sec..

Warnung! Das Gerät nicht in der Nähe von Wasser verwenden und nur mit einem trockenen Tuch säubern.

¡Advertencia! No utilice este dispositivo cerca del agua y límpielo solamente con un paño seco.

Aviso! Não utilize este dispositivo perto da água e limpe-o somente com um pano seco.

Avviso! Non utilizzare questo dispositivo vicino all'acqua e pulirlo soltanto con un panno asciutto.

**Warning!**

Do not block any ventilation openings. Install in accordance with the manufacturer's instructions.

Avertissement ! Ne bloquez aucune ouverture de ventilation. Suivez les instructions du fabricant lors de l'installation.

Warnung! Die Lüftungsöffnungen dürfen nicht blockiert werden. Nur gemäß den Anweisungen des Herstellers installieren.

¡Advertencia! No bloquee ninguna de las aberturas de la ventilación. Instale de acuerdo con las instrucciones del fabricante.

Aviso! Não obstrua nenhuma das aberturas de ventilação. Instale de acordo com as instruções do fabricante.

Avviso! Non ostruire le aperture di ventilazione. Installare in conformità con le istruzioni del fornitore.

**Warning!**

Do not install near any heat sources such as radiators, heat registers, stoves, or other apparatus (including amplifiers) that produce heat.

Avertissement ! N'installez pas l'appareil près d'une source de chaleur telle que des radiateurs, des bouches d'air de chauffage, des fourneaux ou d'autres appareils (amplificateurs compris) qui produisent de la chaleur.

Warnung! Nicht in der Nähe von Wärmequellen wie Heizkörpern, Heizregistern, Öfen oder anderen Wärme erzeugenden Geräten (einschließlich Verstärkern) aufstellen.

¡Advertencia! No instale cerca de fuentes de calor tales como radiadores, registros de calor, estufas u otros aparatos (incluidos amplificadores) que generan calor.

Aviso! Não instale perto de nenhuma fonte de calor tal como radiadores, saídas de calor, fogões ou outros aparelhos (incluindo amplificadores) que produzam calor.

Avviso! Non installare vicino a fonti di calore come termosifoni, diffusori di aria calda, stufe o altri apparecchi (amplificatori compresi) che emettono calore.

**Warning!**

Refer all servicing to qualified service personnel. Servicing is required when the device has been damaged in any way, such as power-supply cord or plug is damaged, liquid has been spilled or objects have fallen into the device, the device has been exposed to rain or moisture, does not operate normally, or has been

dropped.

Avertissement ! Référez-vous au personnel de service qualifié pour tout entretien. L'entretien est exigé quand l'appareil a été endommagé de quelque manière que ce soit, par exemple lorsque le cordon d'alimentation ou la prise sont endommagés, que du liquide a été versé ou des objets sont tombés dans l'appareil, que l'appareil a été exposé à la pluie ou à l'humidité, ne fonctionne pas normalement ou est tombé.

Warnung! Das Gerät sollte nur von qualifizierten Fachkräften gewartet werden. Eine Wartung ist fällig, wenn das Gerät in irgendeiner Weise beschädigt wurde, wie bei beschädigtem Netzkabel oder Netzstecker, falls Flüssigkeiten oder Objekte in das Gerät gelangen, das Gerät Regen oder Feuchtigkeit ausgesetzt wurde, nicht ordnungsgemäß funktioniert oder fallen gelassen wurde.

¡Advertencia! Consulte al personal calificado por cuestiones de reparación. El servicio de reparación se requiere cuando el dispositivo ha recibido cualquier tipo de daño, por ejemplo cable o espigas dañadas, se ha derramado líquido o se han caído objetos dentro del dispositivo, el dispositivo ha sido expuesto a la lluvia o humedad, o no funciona de modo normal, o se ha caído.

Aviso! Remeta todos os serviços de manutenção para o pessoal de assistência qualificado. A prestação de serviços de manutenção é exigida quando o dispositivo foi danificado mediante qualquer forma, como um cabo de alimentação ou ficha que se encontra danificado/a, quando foi derramado líquido ou caíram objectos sobre o dispositivo, quando o dispositivo foi exposto à chuva ou à humidade, quando não funciona normalmente ou quando foi deixado cair.

Avviso! Fare riferimento al personale qualificato per tutti gli interventi di assistenza. L'assistenza è necessaria quando il dispositivo è stato danneggiato in qualche modo, ad esempio se il cavo di alimentazione o la spina sono danneggiati, è stato rovesciato del liquido è stato rovesciato o qualche oggetto è caduto nel dispositivo, il dispositivo è stato esposto a pioggia o umidità, non funziona correttamente o è caduto.

**Caution!**

This device is a Class A product. Operation of this equipment in a residential area is likely to cause harmful interference, in which case users will be required to take whatever measures may be necessary to correct the interference at their own expense.

Attention! Le périphérique est un produit de Classe A. Le fonctionnement de cet équipement dans une zone résidentielle risque de causer des interférences nuisibles, auquel cas l'utilisateur devra y remédier à ses propres frais.

Achtung! Dies ist ein Gerät der Klasse A. Bei Einsatz des Geräts in Wohngebieten kann es Störungen des Radio- und Fernsehempfangs verursachen. In diesem Fall muss der Benutzer alle notwendigen Maßnahmen ergreifen, die möglicherweise nötig sind, um die Störungen auf eigene Rechnung zu beheben.

¡Precaución! Este es un producto clase A. El uso de este equipo en áreas residenciales puede causar interferencias nocivas, en cuyo caso, se requerirá que los usuarios tomen cualquier medida necesaria para corregir la interferencia por cuenta propia.

Cuidado! Este dispositivo é um produto Classe A. Operar este equipamento em uma área residencial provavelmente causará interferência prejudicial; neste caso, espera-se que os usuários tomem as medidas necessárias para corrigir a interferência por sua própria conta.

Attenzione! Questo dispositivo è un prodotto di Classe A. Il funzionamento di questo apparecchio in aree residenziali potrebbe causare interferenze dannose, nel cui caso agli utenti verrà richiesto di adottare tutte le misure necessarie per porre rimedio alle interferenze a proprie spese.

Warning!

Disconnect the external AC power supply line cord(s) from the mains power before moving the unit.

Avertissement ! Retirez le ou les cordons d'alimentation en CA de la source d'alimentation principale lorsque vous déplacez l'appareil.

Warnung! Trennen Sie die Wechselstrom-Versorgungskabel vom Netzstrom, bevor Sie das Gerät verschieben.

¡Advertencia! Cuando mueva la unidad desenchufe de la red eléctrica el/los cable(s) de la fuente de alimentación CA tipo brick.

Advertência! Remova os cabos CA de alimentação brick da rede elétrica ao mover a unidade.

Avvertenza! Scollegare il cavo dell'alimentatore quando si sposta l'unità.

Hazard Warning!

High Voltage. This situation or condition can cause injury due to electric shock.

Avertissement ! Tension élevée. Cette situation ou condition peut causer des blessures dues à un choc électrique.

Warnung! Hochspannung. Diese Situation oder Bedingung kann zu Verletzungen durch Stromschlag führen.

¡Advertencia! Alto voltaje . Esta situación o condición puede causar lesiones debidas a una descarga eléctrica.

Aviso! Alta Tensão . Esta situação ou condição pode causar danos devido a choques elétricos.

Avviso! Alta tensione. Questa situazione o condizione può causare lesioni a causa di scosse elettriche.

Warning!

Only use attachments and accessories specified and/or sold by the manufacturer.

Avertissement ! Utilisez seulement les attaches et accessoires spécifiés et/ou vendus par le fabricant.

Warnung! Verwenden Sie nur Zusatzgeräte und Zubehör angegeben und / oder verkauft wurde durch den Hersteller.

¡Advertencia! Utilice solamente los accesorios y conexiones especificados y/o vendidos por el fabricante.

Aviso! Utilize apenas equipamentos/acessórios especificados e/ou vendidos pelo fabricante.

Avviso! Utilizzare soltanto i collegamenti e gli accessori specificati e/o venduti dal produttore.

**Warning!**

Do not defeat the safety purpose of the polarized or grounding-type plug. A polarized plug has two blades with one wider than the other. A grounding type plug has two blades and a third grounding prong. The wide blade or the third prong are provided for your safety. If the provided plug does not fit into your outlet, consult an electrician for replacement of the obsolete outlet.

Avertissement ! La sécurité de la prise polarisée ou de la prise de type mise à la terre ne doit en aucun cas être empêchée de fonctionner. Une prise polarisée a deux broches, l'une étant plus large que l'autre. Une prise de type mise à la terre a deux broches et une troisième broche pour la mise à la terre. La broche large ou la troisième broche sont fournies pour votre sécurité. Si la prise fournie ne s'insère pas dans votre prise femelle, consultez un électricien pour le remplacement de la prise femelle obsolète.

Warnung! Der Sicherheitszweck des gepolten bzw. Schukosteckers ist zu berücksichtigen. Ein gepolter Stecker verfügt über zwei Pole, von denen einer breiter als der andere ist. Ein Schukostecker verfügt neben den zwei Polen noch über einen dritten Pol zur Erdung. Der breite Pol bzw. der Erdungspol dienen der Sicherheit. Wenn der zur Verfügung gestellte Stecker nicht in Ihren Anschluss passt, konsultieren Sie einen Elektriker, um den veralteten Anschluss zu ersetzen.

¡Advertencia! No eche por tierra la finalidad del tipo de enchufe polarizado con conexión a tierra. Un enchufe polarizado tiene dos espigas, una más ancha que la otra. Un enchufe con conexión a tierra tiene dos espigas iguales y una tercera espiga que sirve para la conexión a tierra. La espiga ancha, o la tercera espiga, sirven para su seguridad. Si el enchufe suministrado no encaja en el tomacorriente, consulte con un electricista para reemplazar el tomacorriente obsoleto.

Aviso! Não anule a finalidade da segurança da ficha polarizada ou do tipo ligação terra. Uma ficha polarizada tem duas lâminas sendo uma mais larga do que a outra. Uma ficha do tipo de ligação à terra tem duas lâminas e um terceiro terminal de ligação à terra. A lâmina larga ou o terceiro terminal são fornecidos para sua segurança. Se a ficha fornecida não couber na sua tomada, consulte um electricista para a substituição da tomada obsoleta.

Avviso! Non compromettere la sicurezza della spina polarizzata o con messa a terra. Una spina polarizzata ha due spinotti, di cui uno più largo. Una spina con messa a terra ha due spinotti e un terzo polo per la messa a terra. Lo spinotto largo o il terzo polo sono forniti per motivi di sicurezza. Se la spina fornita non si inserisce nella presa di corrente, contattare un elettricista per la sostituzione della presa obsoleta.

**Warning!**

Since the Mains plug is used as the disconnection for the device, it must remain readily accessible and operable.

Avertissement ! Puisque la prise principale est utilisée pour débrancher l'appareil, elle doit rester aisément accessible et fonctionnelle.

Warnung! Da der Netzstecker als Trennvorrichtung dient, muss er stets zugänglich und funktionsfähig sein.

¡Advertencia! Puesto que el enchufe de la red eléctrica se utiliza como dispositivo de desconexión, debe seguir siendo fácilmente accesible y operable.

Aviso! Dado que a ficha principal é utilizada como a desconexão para o dispositivo, esta deve manter-se prontamente acessível e funcional.

Avviso! Poiché il cavo di alimentazione viene usato come dispositivo di sconnessione, deve rimanere prontamente accessibile e operabile.

**Warning!**

Protect the power cord from being walked on or pinched particularly at plugs, convenience receptacles, and the point where they exit from the device.

Avertissement ! Protégez le cordon d'alimentation pour que l'on ne marche pas dessus ou qu'on le pince, en particulier au niveau des prises mâles, des réceptacles de convenance, et à l'endroit où il sort de l'appareil.

Warnung! Es muss verhindert werden, auf das Netzanschlusskabel zu treten oder dieses zu knicken, besonders an den Steckern, den Steckerbuchsen und an dem Punkt, an dem das Kabel aus dem Gerät austritt.

¡Advertencia! Puesto que el enchufe de la red eléctrica se utiliza como dispositivo de desconexión, debe seguir siendo fácilmente accesible y operable.

Aviso! Proteja o cabo de alimentação de ser pisado ou de ser comprimido particularmente nas fichas, em tomadas de parede de conveniência e no ponto de onde sai do dispositivo.

Avviso! Proteggere il cavo di alimentazione in modo che nessuno ci cammini sopra e che non venga schiacciato soprattutto in corrispondenza delle spine e del punto in cui esce dal dispositivo.

Warning!

Unplug this device during lightning storms or when unused for long periods of time.

Avertissement ! Débranchez cet appareil pendant les orages avec éclairso u s'il est inutilisé pendant de longues périodes.

Warnung! Das Gerät ist bei Gewitterstürmen oder wenn es über lange Zeiträume ungenutzt bleibt vom Netz zu trennen.

¡Advertencia! Desenchufe este dispositivo durante tormentas eléctricas o cuando no se lo utilice por largos periodos del tiempo.

Aviso! Desconecte este dispositivo da tomada durante trovoadas ou quando não é utilizado durante longos periodos de tempo.

Avviso! Utilizzare soltanto i collegamenti e gli accessori specificati e/o venduti dal produttore, quali il treppiedi e l'esoscheletro.

Warning!

Do not open the chassis. There are no user-serviceable parts inside. Opening the chassis will void the warranty unless performed by an AJA service center or licensed facility.

Avertissement ! Ne pas ouvrir le châssis. Aucun élément à l'intérieur du châssis ne peut être réparé par l'utilisateur. La garantie sera annulée si le châssis est ouvert par toute autre personne qu'un technicien d'un centre de service ou d'un établissement agréé AJA.

Warnung! Öffnen Sie das Gehäuse nicht. Keine der Geräteteile können vom Benutzer gewartet werden. Durch das Öffnen des Gehäuses wird die Garantie hinfällig, es sei denn, solche Wartungsarbeiten werden in einem AJA-Service-Center oder einem lizenzierten Betrieb vorgenommen.

¡Advertencia! No abra el chasis. El interior no contiene piezas reparables por el usuario. El abrir el chasis anulará la garantía a menos que se lo haga en un centro de servicio AJA o en un local autorizado.

Advertência! Não abra o chassi. Não há internamente nenhuma peça que permita manutenção pelo usuário. Abrir o chassi anula a garantia, a menos que a abertura seja realizada por uma central de serviços da AJA ou por um local autorizado.

Avvertenza! Non aprire lo chassis. All'interno non ci sono parti riparabili dall'utente. L'apertura dello chassis invaliderà la garanzia se non viene effettuata da un centro ufficiale o autorizzato AJA.
