

## Release Notes—Version 8.0

### Mac Software for these supported models:

**KONA 3, LHe, LHi, LSe, and Io Express**

### General

If you are installing your KONA or Io Express hardware into a computer that has previously had another video capture card or drivers, we recommend running the AJA Conflict Checker utility BEFORE installing the KONA/Io Express software. The AJA Conflict Checker will help you identify old drivers or software files that need to be removed before installing the new software. Also, please read the “ReadMeFirst.PDF” document on the installation CD, particularly if you are installing for the first time.

### Installation Notes—Please Read

**Note:** *Version 8.0 supports Final Cut Studio Version 3 and Version 2. Not all features will work with versions earlier than Version 3. Please ensure you use the correct software for your system. AJA Driver Compatibility as of KONA Version 8.0 software is as follows:*

FCP 7 - 6.0.x KONA Driver version 8.0 (Snow Leopard and Leopard OS compatible)

FCP 7 - 6.0.x KONA Driver version 6.5 (Leopard OS compatible version)

FCP 6.0.x - KONA Driver version 6.0.3 (Leopard and Tiger OS compatible version)

Also, please note that Easy Setups from earlier versions may not work properly in Final Cut Pro 7.

AJA provides separate installers for each board that only install the board-specific driver for a given KONA board. Please ensure that you use the correct installer for the KONA model present in your system. If you install the wrong software, the KONA Control Panel will report “no board” due to incorrect driver installation. Also, if you should ever wish to regress to an earlier version of software, you will have to perform the following steps to ensure proper operation. *Do not try to simply run an older KONA installer over a newer version*—doing so will not properly remove the newer components and will lead to improper operation.

1. Run the KONA Uninstaller from the current installation.
2. Install the desired KONA software using its installer package.

**Note:** If after installing the Version 8.0 update, you launch Final Cut Pro and receive a warning message during its launch concerning “Quartz Extreme”—then go to the AJA Control Panel’s *Setup* Tab screen and uncheck the *Enable Desktop Display* checkbox. Next, reboot the Macintosh—this will clear the error and ensure proper operation.

After installing the AJA driver, if you experience any issues booting your computer, restart the computer while holding down the shift key (safe boot), uninstall the AJA driver and then install the NDD driver version instead. The AJA KONA driver version 8.0 NDD is the same as driver version 8.0, but removes the Macintosh Desktop Display feature.

## Features

- Added 2Kx1080 support (KONA LHi)
- Added 2Kx1080p25 and 2Kx1080PsF25 support (KONA 3 and KONA LHi)
- Added Easy Setups for 1080p25 (KONA LHe)
- Stereoscopic 3D output (discrete left eye/right eye) via SDI 1 and SDI 2 outputs when used with CineForm Neo3D v5.08 Build 134 or later (KONA 3 only)  
Muxed 3D output (example: side-by-side) via a single video output is possible on other KONA models

## Fixes and Improvements

- Freeze Field/Freeze frame now works properly (All)
- Improved display sleep behavior (All)
- Improved RT performance (All)
- Improved behavior of AJA component interaction with Adobe products (All)
- Improved multi-card support for Custom LUTs. (All)

## Recommended Configuration for Mac Computers

For information on Mac computer slot configuration for KONA cards, please visit the following page on the AJA website: <http://www.aja.com/support/kona/kona-system-configuration.php>
