

Read Me—Additional Easy Setups

Information About Additional Folder of Easy Setups

These additional Io Easy Setups are provided for your convenience when using work-flows that require transcoding from an uncompressed input to either DV, DV50, or Offline RT. These setups are provided for NTSC, PAL, and NTSC Japan. We do not anticipate any issues with using these setups for typical operation, however they are not part of the Apple Qualified Easy Setups.

To use any of the additional Easy Setups, first locate the ones you want by name in the *Additional Easy Setups* folder, then manually drag them into the *Library > Application Support > Final Cut Pro System Support > Custom Settings* folder on your Macintosh.
