Using the NTV With Windows 2000 or XP

If you install an NTV into a system configured with Windows 2000 or XP, the New Hardware Wizard will find the NTV, but will usually identify it as a "Multimedia Video Controller". Cancel the New Hardware Wizard and run the NTV driver installation as normal using the NT driver. When you reboot, the New Hardware Wizard will continue to find the NTV as a "Multimedia Video Controller". Cancel the New Hardware Wizard and open the Windows 2000 Control Panel. Open the Administrative Tools folder and double click on Computer Management. On the Device Manager page, scroll down to "Other Devices" and right click on "Multimedia Video Controller". Click on Disable. Click 'Yes' to the confirmation box. When Windows 2000 restarts, the New Hardware Wizard will not be displayed. Confirm proper configuration of the NTV by opening the NTVControlPanel Load Test Pattern" Dialog and exporting a test pattern.
